

GAP ANALYSIS REPORT

I. PRESENTATION

I.1. Introduction

As a member of the European Union, beginning with January 1, 2007, Romania is expected to continue the integration process of its school system, taking into account all its components and the relationships between them. These include aims, curriculum areas, and ways of learning, ICT pedagogical applications, school structure, resources and teachers.

At the beginning of 2000, the European Commission launched the eLearning Initiative and Action Plan to foster the adaptation of the European Union's education and training systems to the knowledge society through the effective and relevant use of Information and Communication Technologies and the Internet for learning. (Commission of the European Communities (2001), *Concrete Future Objectives of Education Systems*, report from the Commission of 31 January 2001 [COM (2001) 59 final

In 2002, a report to the EU Commission, *The Training of Teachers of a Foreign Language: Developments in Europe (Revised Report, August 2002)* concluded the following recommendations: *All teachers should be trained in the use of ICT approaches for interactive use with pupils in the classroom* *(p.75). And: *More efforts needs to be made to make initial teacher training modules and in-service course content available online and in other distance learning forms.* (p.79)

According to the Eurydice Studies: *Foreign Language Teaching in Schools in Europe* (2001) and as stated in *The European Language Learning Materials Survey* (December 2000): *Many felt that lower level course materials for less widely used and taught languages (LWUTL) were rarely communicative in nature.* Teachers in technical colleges teaching the less taught languages are frequently not educated as language teachers. This means that research and improvements in language teaching methods have not been applied to the less taught languages. This is conclusion is also based on the EU commissioned report: *The Impact of Information and Communications Technologies on the Teaching of Foreign Languages and on the Role of Teachers of Foreign Languages – 2002.* The report states on page 5: *the use and deployment of ICT in FLT and FLL is far from satisfactory, as ICT resources are traditionally reserved for 'computer science' subjects, and rarely assigned to arts subjects. A general lack of appropriate training of language teachers in meaningful uses of ICT tends to strengthen this trend.*

The main purpose of the POOLS project being the integration of ICT into the initial and in-service training of teachers of less widely used and taught languages, a gap analysis research was included in the proposal in order to evaluate the status of the IT infrastructure in Romania and Lithuania and to identify the characteristics of the educational software used in the laboratories involved in teaching and learning processes.

I.2. Target groups

The first target group, according to the *Proposal*, is *teachers in technical colleges teaching the less taught languages* *(C1.1) including minority and regional languages *(C2.A/B/C/D). *Language teachers teaching more commonly taught languages* *(C1.1) are also included.

The second target group is formed of *students from electronics, catering and tourism, healthcare, and media studies*, *(C1.1) and *apprentices in technical colleges*. *(C1.1)

As part of its gap analysis and pilot courses, the Romanian project team extended responsibilities includes research tasks based on a questionnaire which was sent to all *vocational colleges* in Romania.

I.3. Terminology

The term *college* is used differently in the EU countries and in Romania. “**College**” was mainly used in Romania to define short term university studies (3 years). The term has become obsolete since 2004, when the university system was reformed according to the Bologna process, and university colleges, such as our University College for Instructors, became faculties. In the case of the Danish system of vocational education, for example, the term *college* refers to the age group 16-19, being the equivalent of the Romanian term “**high school**” (age group 14-18/19). The situation is not very different in Britain or other EU countries. That is why the questionnaire was sent to the Romanian vocational high schools. (see *Annexes 4/5*)

The same term, *college*, is still used by some vocational high schools (see *Annex 5*) as a sign of excellence. In this case, “college” has an official meaning as well, being attributed by the Romanian Ministry of Education and Research only to the best vocational high schools. Their official name is generally *Grupul școlar* (i.e. *school group*), as it can be seen from the list in *Annex 5*, because include not only vocational high schools but also schools of arts and crafts, some of them even primary and lower secondary schools. Others are called *Colegiu* (i.e. *college*) and a few others *Liceu* (i.e. *lyceum*).

The term *vocational* is also used differently in Romania and the EU countries. It refers, in Romania, to art, sports, pedagogical and theological high schools. Technological and theoretical high schools are administratively separated from the vocational ones. As a difference, for example, technical, commercial, agricultural and social and healthcare programmes are taught in countries like Great Britain and Denmark, in vocational colleges (see www.workindenmark.dk/Vocational_education). In order to include all target groups mentioned in the proposal (both teachers and students) we had to take into consideration the peculiarities of the Romanian educational system and send our questionnaires not only to the *vocational high schools* but also to the technological ones.

I.4. The Questionnaire

The questionnaire used in the research (see *Annex 2*) is the result (as it can be noticed from the exchange of e-mail messages) of a draft made by the Romanian and Lithuanian teams, to which the suggestions received from all our POOLS partners were added. The resulting Romanian questionnaire is divided into five chapters containing questions referring to the characteristics of the ICT-equipped laboratories and of the activities involving such laboratories, the number of the laboratories used in the teaching and learning of languages or other subjects, the audio-visual devices used in the teaching and learning process, and the characteristics of the software used in the ICT-equipped labs.

I.5. The Distribution of the Questionnaire

The general inspectors of the Schools’ Inspectorates in the 41 districts of Romania and in Bucharest (see *Annexes 3/4/5*) were informed about the aims and the

products of the POOLS project and were asked to approve the distribution of the questionnaires to the high schools within the respective district. The inspectors in charge with the European integration in each school's inspectorate were also involved in the process. They were asked to provide additional information about the vocational high schools in their district (name of institution, address, phone/fax number, website, e-mail address), and they also offered support in contacting the targeted institutions.

The questionnaires were sent either by fax, by e-mail or, in some cases (for the neighbouring districts), these were handed out directly. The educational institutions were, at the same time, informed about the purpose of the project and expressed their consent to fill in the questionnaire.

There are 974 vocational high schools in Romania (see *Annex 5*), and questionnaires were sent to each of them. We received 370 filled in questionnaires, that is a 38% answer rate.

I.6. *The IT-Based Educational System - Sistem Educational Informatizat (SEI) - Advanced eLearning (AEL)- the Learning and Content Management System* (see: www.edu.ro)

References are made, within our research, to the official data provided by the Romanian Ministry of Education and Research (RMER) concerning the infrastructure and the characteristics of the software used in the Romanian educational system. That is why we include a brief presentation of the two systems in the preliminaries of the research.

SEI is a project that started in 2001 and includes 4 stages. The first stage took place between 2001 and 2002 and included the supply of 120 IT laboratories. Stage II, 2002-2003 included the installation and configuration of 1,100 IT platforms. Stage III, 2003-2004, had as the main objective the finalization of the high schools' computerization adding 290 complete IT platforms to the previous ones. As a result, all high schools in Romania (1,510) have a complete IT platform.

The standardized high-school IT classroom is composed of 1 server, 25 workstations, printer, scanner, equipment for networking and Internet connectivity. Manufacturers configure the computers with basic operating software: operating system, email server and email clients, software firewall, office software and anti-virus software. The computers are configured by manufacturer with basic operating software: Win32 and Linux operating system, email server and email clients, software firewall, office software, anti-virus software.

AEL is an integrated Learning and Content Management System developed by SIVICO aimed to support professors/tutors, students, content editors, administrative staff and other stakeholders in the learning process. AEL is the backbone of the SEI Program, offering support for teaching and learning, evaluation and grading, content management, process management and monitoring, curriculum design and administration and also providing the tools for communication and synchronization between the local solutions within the national SEI framework. AEL is qualified of management and delivery of various content types such as interactive multimedia, tutorials, exercises, simulations, educational games etc. Its powerful knowledge base, which acts as a content repository and management solution, adaptive, configurable and searchable, allows first-time users too easily:

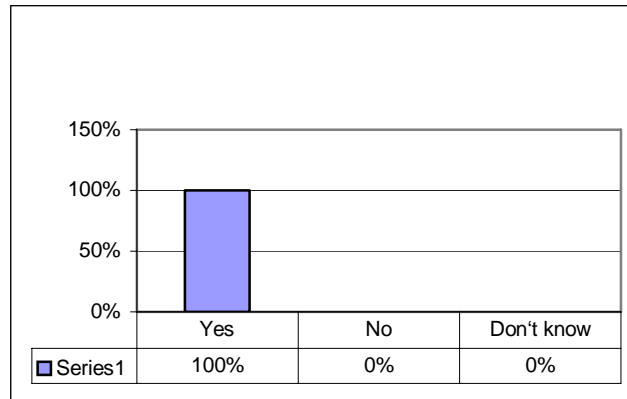

- create content (built-in HTML editor, mathematical formulae editor, test editors and wizards, glossaries/dictionaries editor);
- import/export content from files, archives/folders of resources, standard packaging formats like SCORM and IMS;
- adapt or modify content;
- derive their own courses from common content components.

II. ANSWERS AND INTREPRETATIONS OF THE QUESTIONNAIRE

1. IDENTIFICATION OF THE ICT-EQUIPPED LABORATORIES CHARACTERISTICS

Source Questionnaire: 1.1.

1.1.	Do you have ICT laboratories within you institution?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
------	--	---------------------------------	--------------------------------	---

All respondents confirmed the existence of ICT laboratories in their institutions. The hardware infrastructure in the vocational high schools was provided mainly by the Ministry of Education and Research through the nationwide run programme **SEI**. One of the crucial prerequisites that created the need for developing an IT based educational system in 2001 was the very small number of PC-s per pupils in the Romanian schools (3 PC-s per 100 pupils in secondary schools, 5 PC-s in high schools)

Source Questionnaire: 1.2.

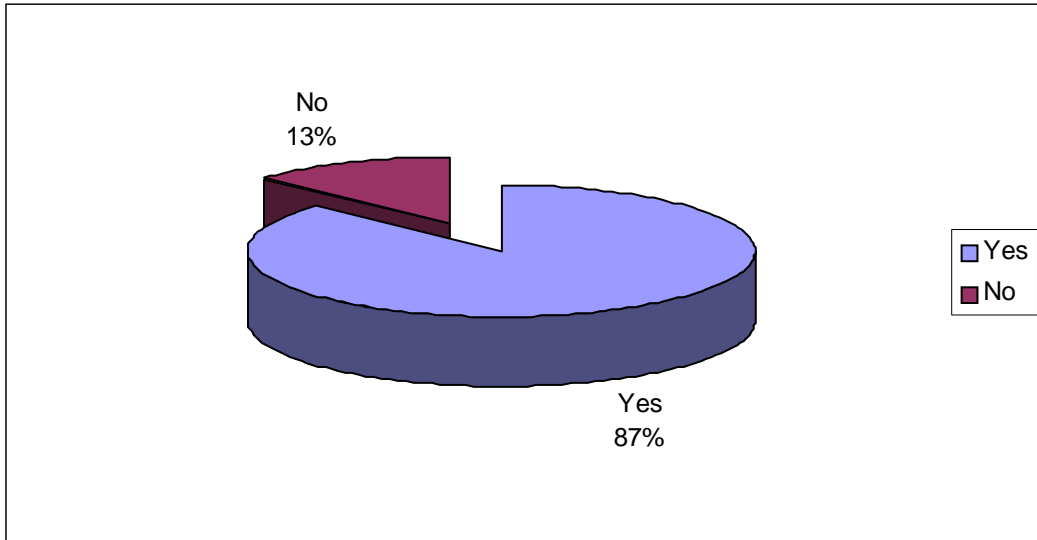

1.2.	Specify the number of ICT laboratories
------	--	-------

The number of laboratories varies between 1 and 5. There are vocational high schools (16%), whose managers showed little interest in the acquisition of IT laboratories, being probably satisfied with the platform provided by the SEI project. The highest percentage, 29%, includes vocational high schools with three laboratories. Only 5% of the respondent institutions have more than 6 laboratories. As a result of the de-centralization process, many municipalities have introduced strategies, which are designed to broaden access to ICT and are also concerned with education. This demonstrates that central and local levels can work flexibly together, the outcome being the increased number of IT labs.

At the time of our research, almost 65% of the vocational high school already had IT equipment from previous projects run by the Ministry of Education and Research before 2001. Vocational high-schools were the first beneficiaries of such initiatives. Phare-Vet Project (1996-2000), for example, which distributed 6-9 complete ICT platforms in each district of Romania.

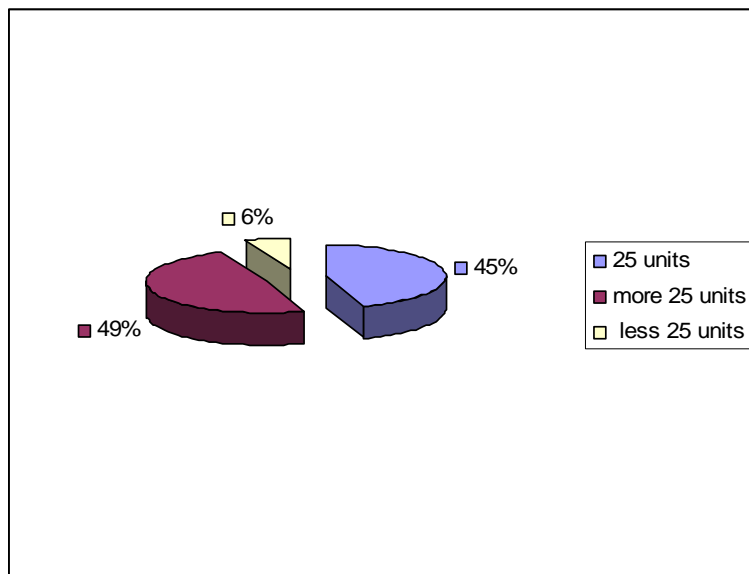

Source Questionnaire: 1.3.

1.3.	Are there any intentions to expand the number of ICT laboratories?	Yes <input type="checkbox"/>	No <input type="checkbox"/>
------	--	---------------------------------	--------------------------------

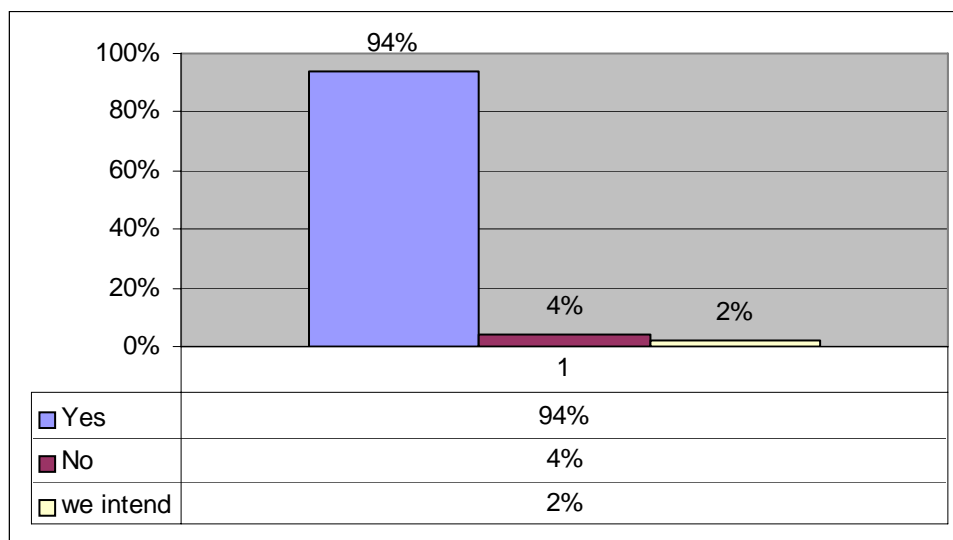

The high percentage of affirmative answers received, 87%, clearly indicates the intention to expand the number of ICT labs. Not only teachers but also vocational school managers seem determined to enhance the school development through the use of the new technologies. Nationwide-run projects in the field aroused interest in the use of the new technologies and stimulated local initiatives.

1.4.	How many workstations (PC units), on average, are there in each laboratory ?
------	--	-------

The answers received indicate that 45% of the questioned institutions have 25 workstations, on average, in each laboratory. These are the platforms distributed by the Romanian Ministry of Education and Research within the SEI programme. Very significantly, a larger number of vocational high schools have more than 25 units in each laboratory, and only 6% have less than 25 units. The increased number of workstations per lab clearly indicates that local initiative is more and more important and tends to replace the centralized one.

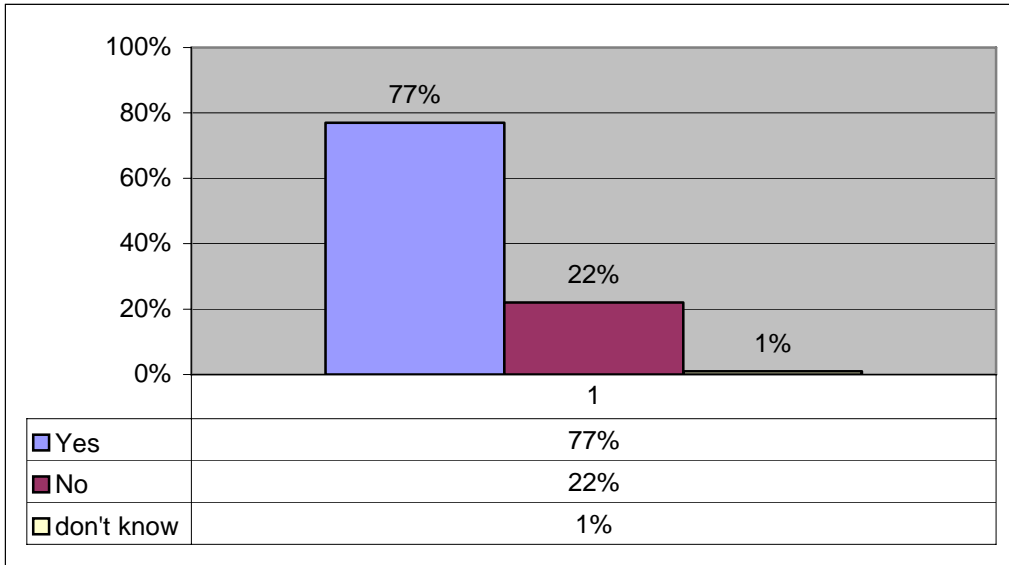

1.5.	Do you use a server with the workstations?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
------	--	---------------------------------	--------------------------------	---

The use of a server with the workstations has become common practice in Romanian vocational high schools. Educational software being available, as well as their use for the teaching and learning of 10 different subjects, the use of a server has evidently become a necessity. As it can be seen from the graphics, 94% of the respondents confirmed the use of at least one server which is used with the workstations. The number of servers increases with the number of laboratories in each vocational high-school. This creates the perspective of interconnecting vocational high school servers in order to create local and regional networks.

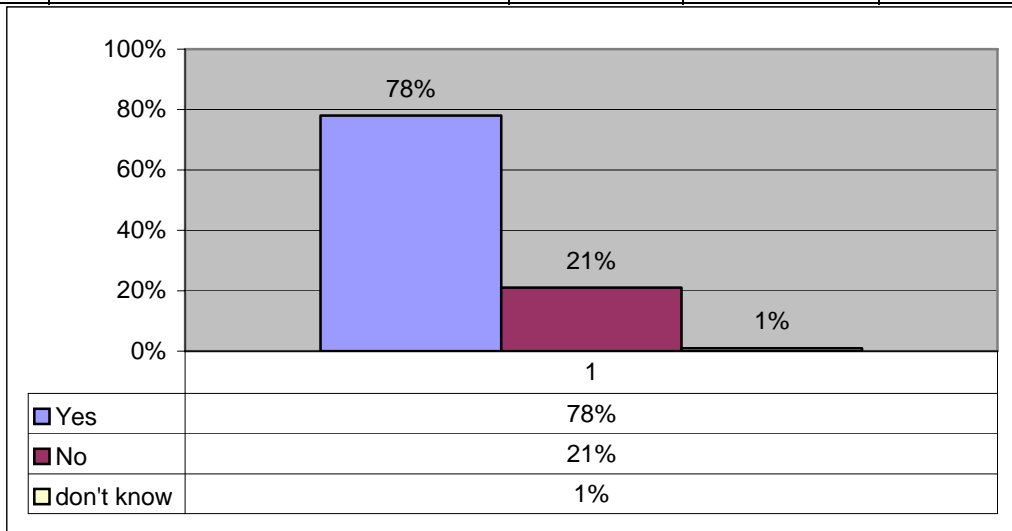

Only 4% of the questioned institutions admitted to having no server connected with the workstations. Either these high-schools showed little interest in connecting their workstations to a server, or their teachers do not know how to use INTRANET and INTERNET. Our research shows that the largest number of such vocational high-schools is in the rural areas, although there is practically no village all over the country which is not connected to the national digital communication system. Lack of interest and delays in training the teachers to use servers with workstations are obvious, although, according to the Romanian Ministry of Education and Science, 2,5000 teachers were trained in each high-schools as part of delivering the platforms of the SEI programme.

1.6.	Does the server / ICT operator restrict the access of the workstations?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Partially <input type="checkbox"/>
------	---	---------------------------------	--------------------------------	---------------------------------------

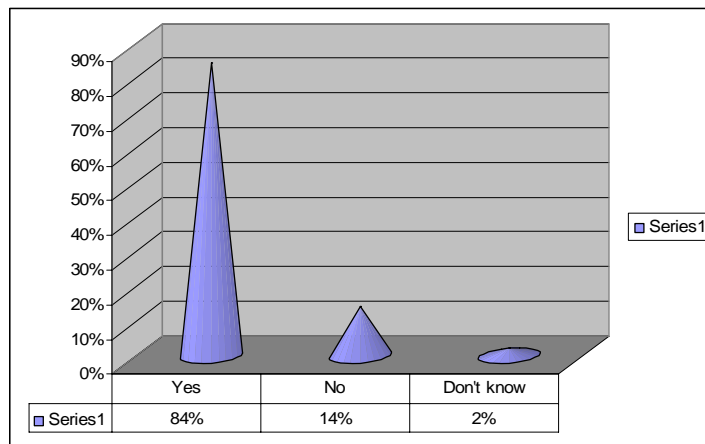

The most worrying outcome of our research is the fact that 80% of the server/ICT operators restrict the access of the workstations and only 19% of them permit it. This indicates a very subjective behaviour that can compromise any effort made by the teachers to use the IT equipment for educational purposes, and clearly contradicts the official regulations. Such an attitude shows that, instead of becoming promoters of the computer assisted methodology and techniques, the server/ICT operators are under the false impression that they own the IT laboratories and it is in their personal power to allow the free use of them by the teachers. As a matter of fact, the promoters of the SEI programme admit having difficulties *in providing sufficient access to technology for teachers and pupils*; Not only school managers, but also the schools' inspectorates in each district are be informed about this unacceptable situation and urgent measures must be taken to ensure free access of the teachers and students to the workstations.

1.7.	Are the workstations connected to a local network (INTRANET)?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Don't know <input type="checkbox"/>
------	---	---------------------------------	--------------------------------	--

78% of the respondents confirmed that their computer platforms are organized, installed and configured in room-based local networks. According to the information provided by the administrators of the IT-Based Educational System (SEI) „vocational schools servers are connected to the schools’ inspectorate server in each district (see Annex 6). The laboratories (local solutions) are integrated into a logical network comprising all the schools in a region. All Romanian regions are integrated into a national network connected to and coordinated by the SEI management unit. In the exchange of information between educational institutions, IT is primarily used to support the administration, but most importantly to support the teaching and learning activities”. (see annex)

1.8.	Are the workstations connected to an external network (INTERNET) ?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Don't know <input type="checkbox"/>
------	--	---------------------------------	--------------------------------	--

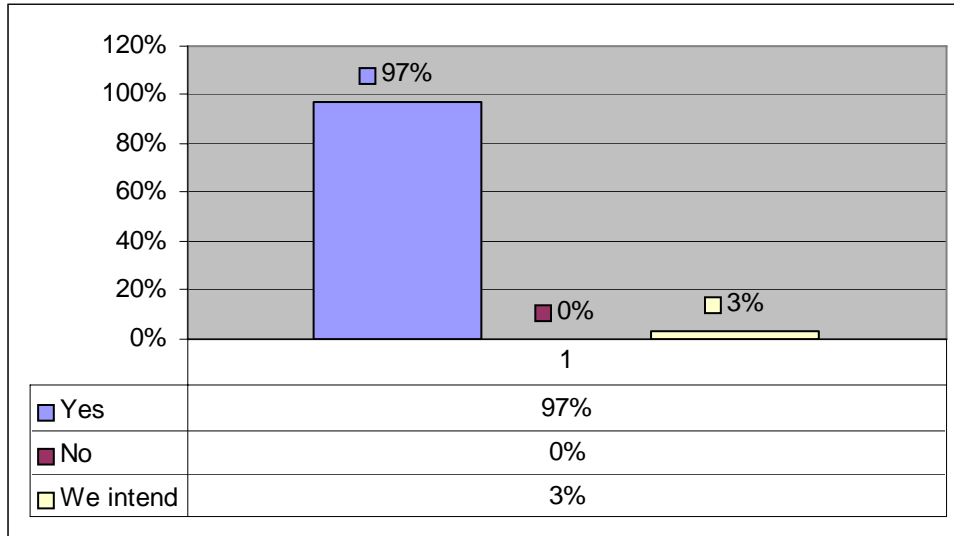

The fact that 84% of the vocational high-schools are connected to the INTERNET is, first of all, the result of the special interest the Ministry has in ensuring a quick and effective exchange of information with the educational institutions all over the country. According to the Ministry of Education and Research, in 2001, access to Internet resources was limited (1 computer connected to the Internet per 100 pupils in secondary schools, and 3.5 in high schools). Within SEI, schools were connected to the Internet as part of administrative projects, aiming also to re-use the technology for educational purposes. All computer platforms are delivered with facilities for Internet connection – modem, router.

Although the situation seems quite positive, 14% of the questioned vocational high schools do not have a permanent connection to the INTERNET. This may be due to the local technical conditions: lack of permanent access to the public digital telephone services or lack of allocated funds for this purpose. 2% of the respondents don't know if they are connected to the INTERNET.

An example of a project that included massive connections of schools to the INTERNET was the Baccalaureate in 2004. On this occasion, 600 examination centres were connected, allowing for automatic reporting of data and monitoring of the examination. Some of them also received the examination questions over secured connections. Although the national network was used then for administrative purposes, Baccalaureate 2004 proved the operability of the system and the fact that from that moment on it can be used for educational purposes as well.

2. IDENTIFY THE CHARACTERISTICS OF YOUR ACTIVITY INVOLVING ICT-EQUIPMENT IN TEACHING & LEARNING PROCESSES

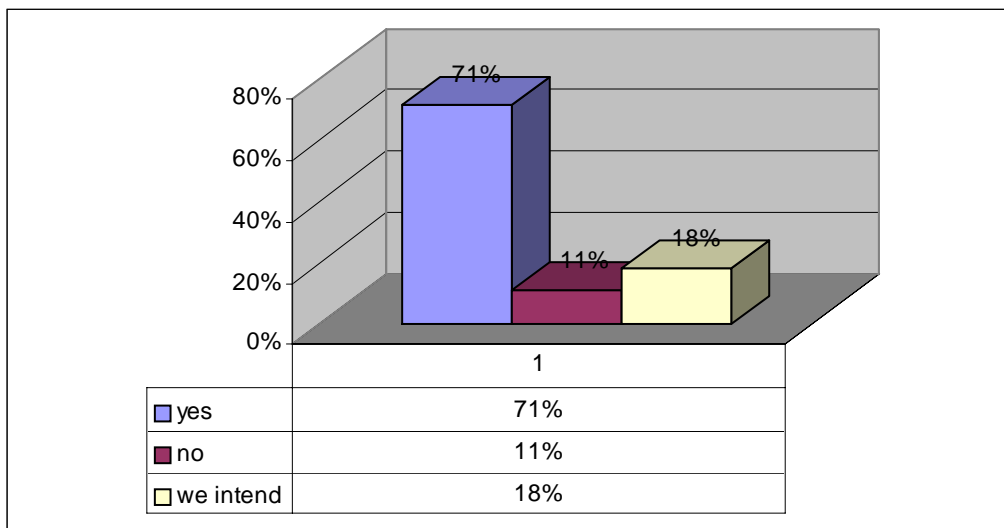

2.1.	Do you use the Web for personal use?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
------	--------------------------------------	---------------------------------	--------------------------------	---

Vocational high school teachers take advantage of the access to the Internet ensured by the ICT platforms. The very high percentage of web users, 97%, confirms the official information that 25,000 high-school teachers were trained as part of the SEI programme of delivering the platforms. The training sessions held for expert teachers and inspectors provided the information and formed the basic skills necessary for them to use the Web for personal purposes. The training courses introduced in life-long learning curricula for teachers (general computer skills and using ITC in teaching) also contributed to the high rate of computer literacy in Romanian vocational high schools. According to the same official source of information 206 teachers were trained and 7000 teachers each year are estimated to be trained in the SEI programme. (see the web page of the Ministry of Education and Sciences, www.edu.ro)

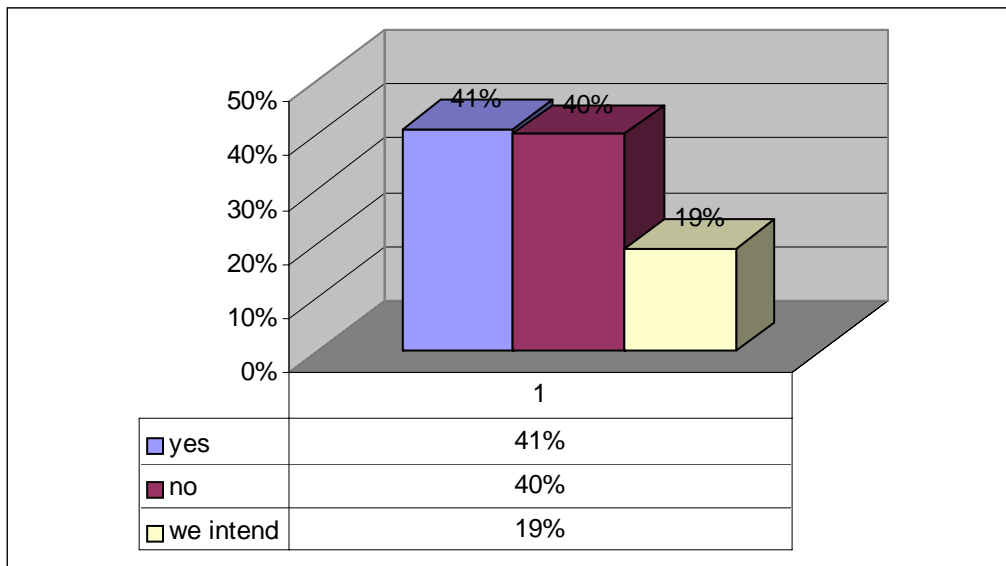

Only 3% of the questioned teachers *intend* to use the web, and there are no teachers who don't use this facility.

2.2.	Do you use the Web for teaching and learning in your classes?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
------	---	---------------------------------	--------------------------------	---

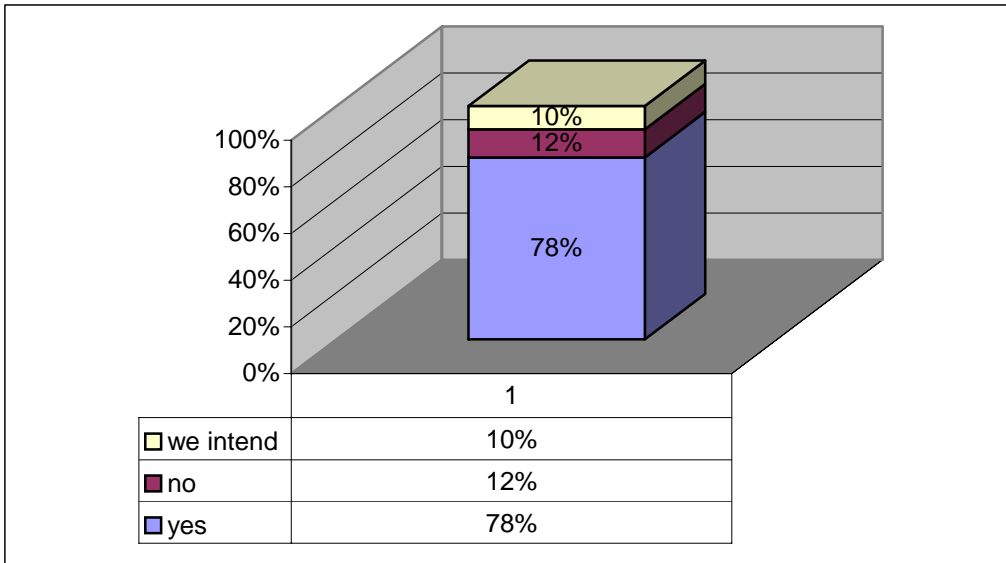

The use of the Web for teaching and learning activities is confirmed by 71% of the vocational school teachers. A low percentage of teachers, 11%, don't use it for educational purposes, and 18% expressed their intention to start using the Web as part of their professional activity. Age plays an important role in the above-percentages, although a specific question was not introduced in the questionnaire. It is public knowledge in Romania that young teachers (25-35 years old) are more interested and have the necessary expertise to use the Web for educational purposes. Middle aged teachers and those coming close to the end of their didactic career pay no attention to it or even show hostility to the use of ICT in the educational system.

2.3.	Do you use blogs for teaching and learning in your classes?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
------	---	---------------------------------	--------------------------------	---

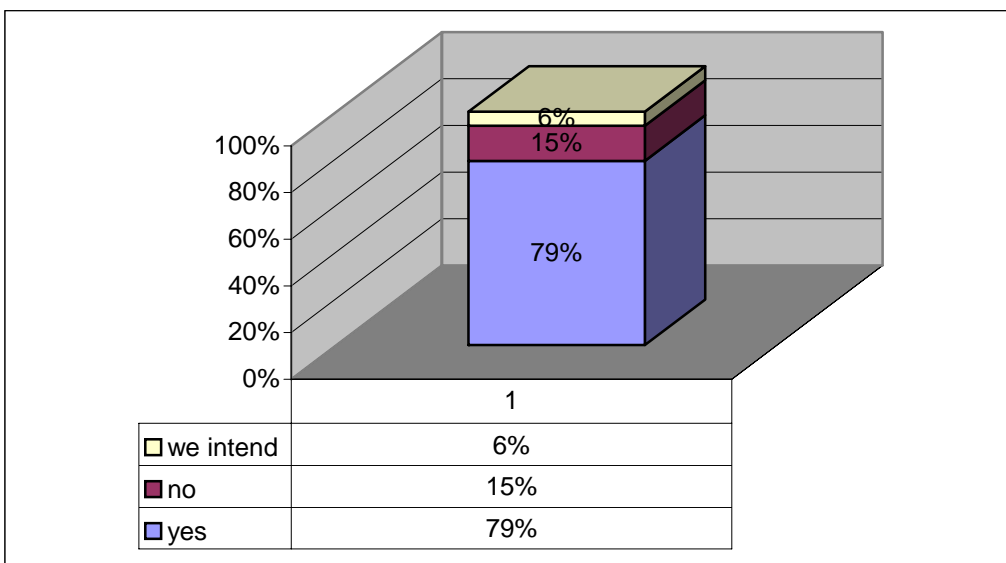

The fairly equal percentage of users (41%), and non-users (40%) of blogs for teaching and learning purposes indicates the moderate interest of the Romanian vocational teachers in this area. The fact that less than 50% of the INTERNET users are interested in integrating blogs into lessons is due to the novelty of the device. Consequently, almost half of the users have little or no information in this field. If we add the 19% percentage of the teachers who expressed their intention to use blogs for educational purposes to the already existing percentage of blog-users (41%) we may expect an increasing percentage of the blog-users in the next years.

2.4.	Have you had your students write web pages?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
------	---	---------------------------------	--------------------------------	---

Although this is not an easy activity, 78% of the questioned institutions involve their students in creating web pages. The access to the local networks and especially the access to the INTERNET facilitates communication and more and more vocational high schools created their own web pages which they use not only for administrative purposes but also to make themselves and their educational policy known by the local communities or nationwide. However, as it can be seen from the list of vocational high schools (annex 3); few of them have an e-mail address that also leads to their web pages.

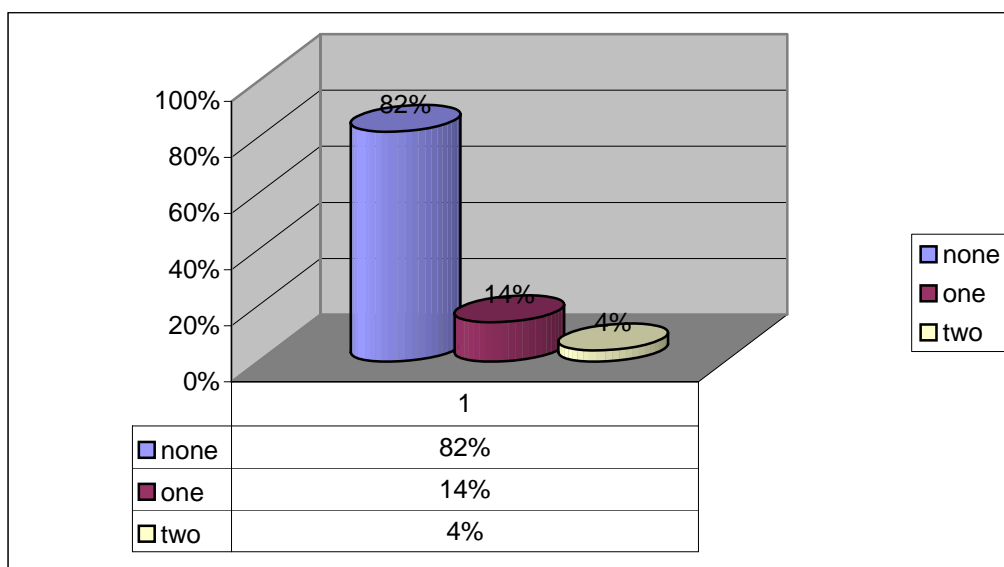

2.5.	Do you use portfolios with your students?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
------	---	---------------------------------	--------------------------------	---

The use of portfolios has already become a common practice in vocational high schools. As the graphic shows, 79% of the teachers use portfolios in the teaching and learning process, 15% don't use them, and 6% expressed their intention to include portfolios in their educational practice. Both teachers and students are already using portfolios for some years and this method is common practice not only in high schools but also in middle and primary schools. The increasing level of computer literacy provided the necessary tools for creating electronic portfolios, too.

3. IDENTIFY THE CHARACTERISTICS REGARDING YOUR ICT-EQUIPPED LABORATORIES USED IN THE TEACHING & LEARNING PROCESSES

3.1.	How many of the available laboratories are used exclusively for computer assisted Romanian language teaching?
-------------	---	-------

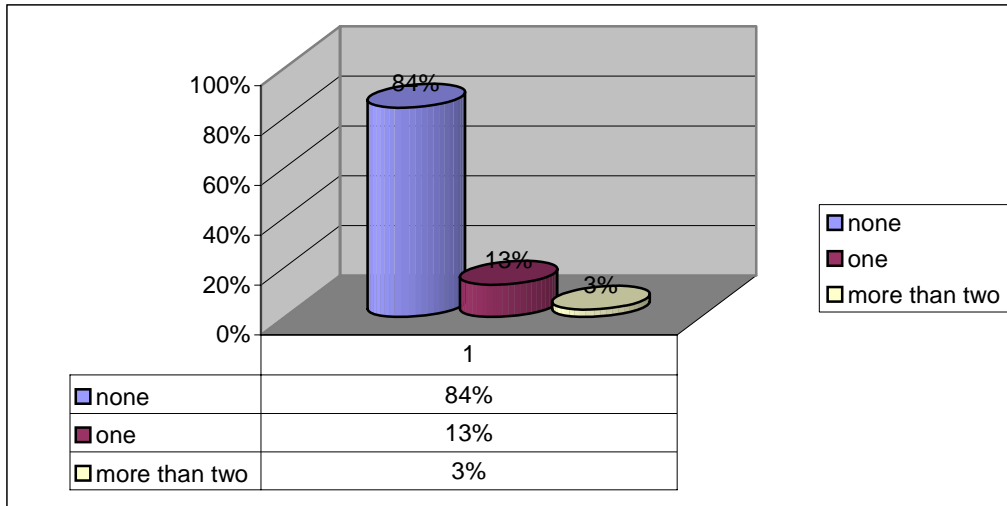

The answers received indicate that very few laboratories are used for computer-assisted teaching of Romanian. 82% of the vocational high schools don't use their ICT equipped laboratories for this purpose. Only 14% of the vocational schools use one lab in the teaching and learning of Romanian. The percentage of vocational high schools that use two labs for the same purpose is even less (only 4%), although, according to official information: *each high-school in Romania currently has at least one IT educational platform for use in teaching and learning not only of Mathematics, Biology, Physics, Chemistry, Computer Science, History but also of the **Romanian language.***

The same source (the SEI programme run by the Ministry of Education and Sciences) informs the educational community that *during the fourth phase (2005-2008), 1,255 multimedia lessons will be created and distributed in all IT-labs from middle schools and high schools.* Unfortunately, we are not told how many of these multimedia lessons are dedicated to the computer-assisted teaching of Romanian.

The lack of educational software in these fields is obvious. Teachers of Romanian haven't found the best ways of using ICT within their lessons yet. Teaching Romanian literature is the main didactic activity in vocational high schools curricula, and

traditional methods are still used on a large scale. There is a considerable gap that needs to be filled in this area.

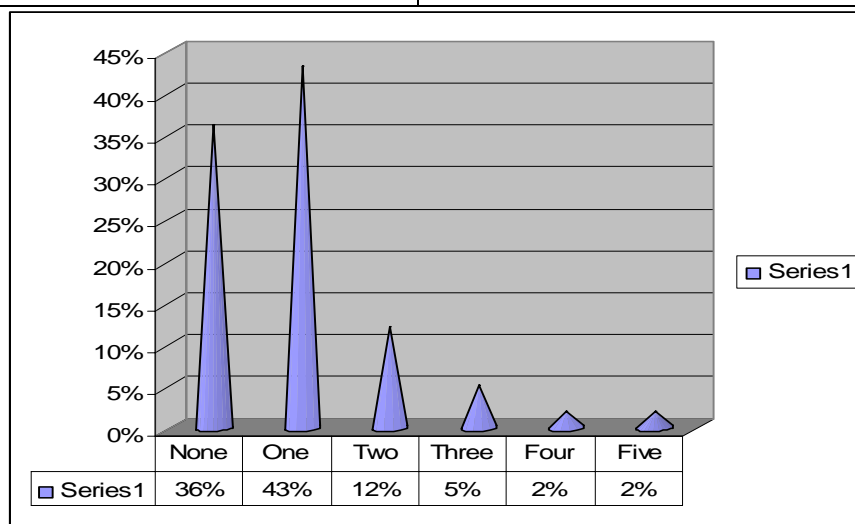

3.2.	How many of the available laboratories are used exclusively for computer assisted foreign languages teaching?
-------------	---	-------

The situation is almost identical with the computer assisted teaching of the foreign languages, although, in Romania, these teachers, and especially teachers of English, are considered pioneers in using computer assisted language teaching. Yet, 84% of the respondents don't use IT laboratories for this purpose, 13% use one lab, and 3% more two labs. One of the explanations for these alarming percentages is the limited access of the teachers of foreign languages to IT laboratories. Either the server/ICT operators do not consider it necessary to assist teachers of foreign languages in their effort to integrate ICT within their lessons or the teachers themselves are not interested in doing it.

The fourth phase of the SEI programme (2005-2008), includes the creation of **multimedia lessons for teaching English** but they are meant to cover only all 8 years of primary-level education (children 6-14 years old). There is an acute need of educational software that can be used in the computer assisted teaching of foreign languages in Romanian vocational high schools.

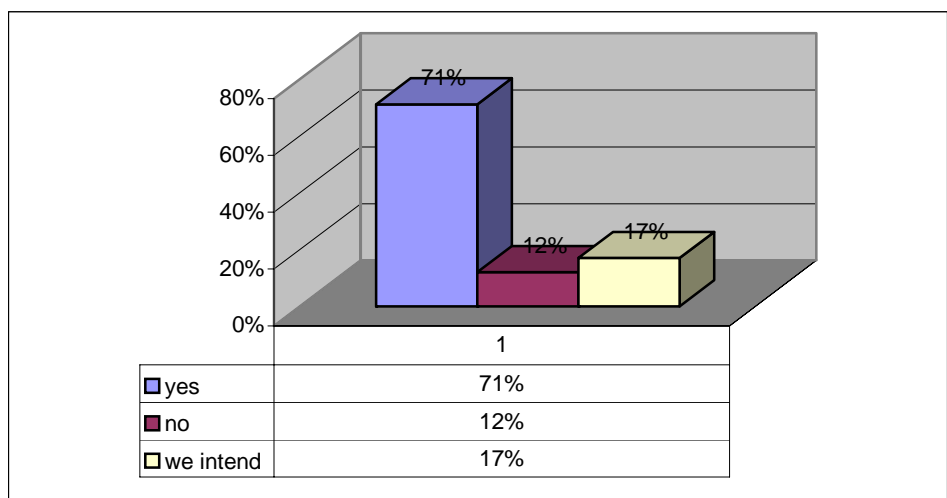

3.3.	How many of the available laboratories are also used for computer assisted teaching in case of other subjects, e.g.? ..?
-------------	---	-------

The computer assisted teaching of other subjects than Romanian and foreign languages are in a more favourable situation. 43% of the respondents use one lab for this purpose, 12% use two labs, 5% three laboratories, and 2% use four or five laboratories. This gives a total of 64% users of laboratories, and a rather high percentage of teachers (36%) who do not use ICT for didactic purposes. On one hand, the larger number of “other subjects” included here explains the difference of percentages. The teaching and learning of Mathematics, Biology, Physics, Chemistry, Computer Science, Technologies and even History and Geography are in a more favourable position than the computer assisted teaching and learning of Romanian and foreign languages. This situation is due to the fact that the Learning and Content Management System AEL – Advanced eLearning was implemented in all 1,510 Romanian high schools and ensures a higher level of interactivity and direct, personal experimentation of phenomena and scientific theories by students.

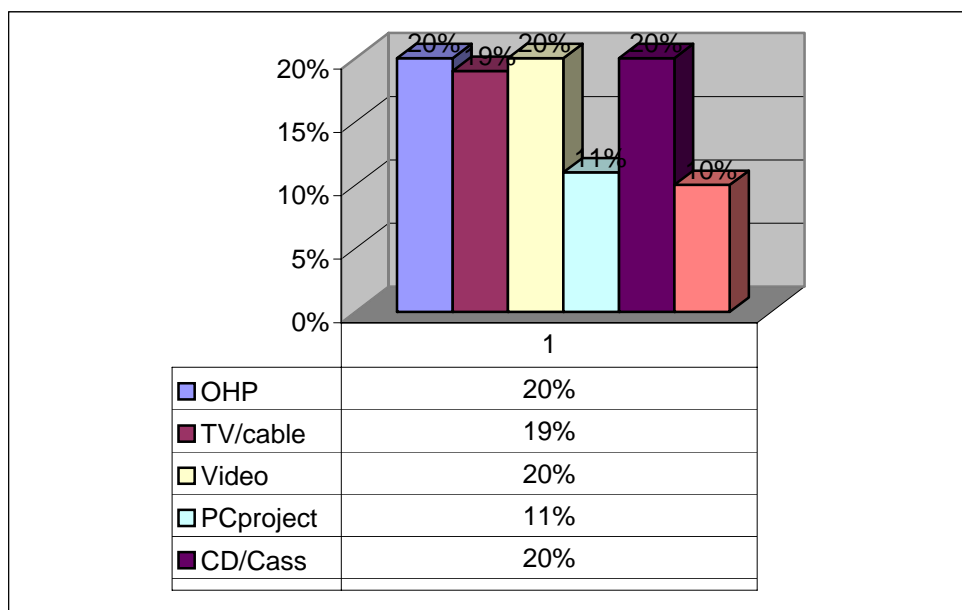

4. IDENTIFY OTHER EQUIPMENT USED IN YOUR LABORATORIES, BESIDES ICT, INVOLVED IN TEACHING & LEARNING PROCESSES

4.1	Do you use any other audio-video equipment in your laboratories, e.g., Over Head Projector, PC Projector, VCR, DVD, TV, etc. ?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
------------	--	---------------------------------	--------------------------------	---

The use of audio-video equipment for teaching and learning purposes has started in Romania since the 1970s. Over-head projectors, VCRs, tape recorders, cassette players, slide projectors, movie projectors, television, and cable TV are currently used by most of the teachers. Those who don't use multimedia devices already constitute a minority: 12%. Most of the vocational school teachers (71%) currently use such devices, and 17% expressed their intention to do it in the future. National television started broadcasting language teaching programmes 25 years ago, and continues to do it. Movies for various educational purposes were produced and are currently used by teachers, as well as audio and video cassettes containing language teaching materials (foreign languages, English, French, German, Spanish, Italian, and Romanian).

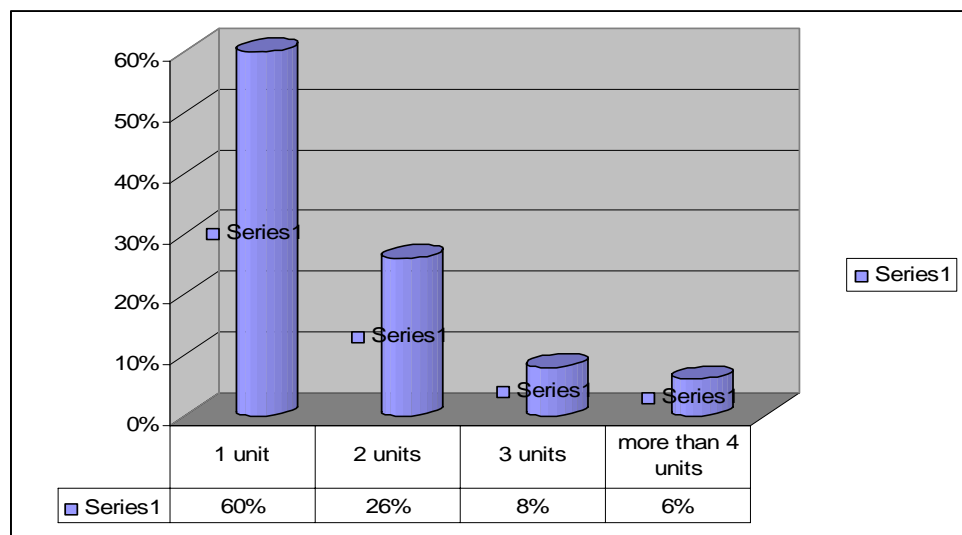

4.2.	Specify the number of these audio-video equipment items. (e.g. <input type="text" value="2"/> , <input type="text" value="0"/>)	Over Head Projector <input type="checkbox"/>	Cable / Satellite Television <input type="checkbox"/>	Video <input type="checkbox"/>
		PC Projector <input type="checkbox"/>	CD/Cassettes player <input type="checkbox"/>	DVD player <input type="checkbox"/>

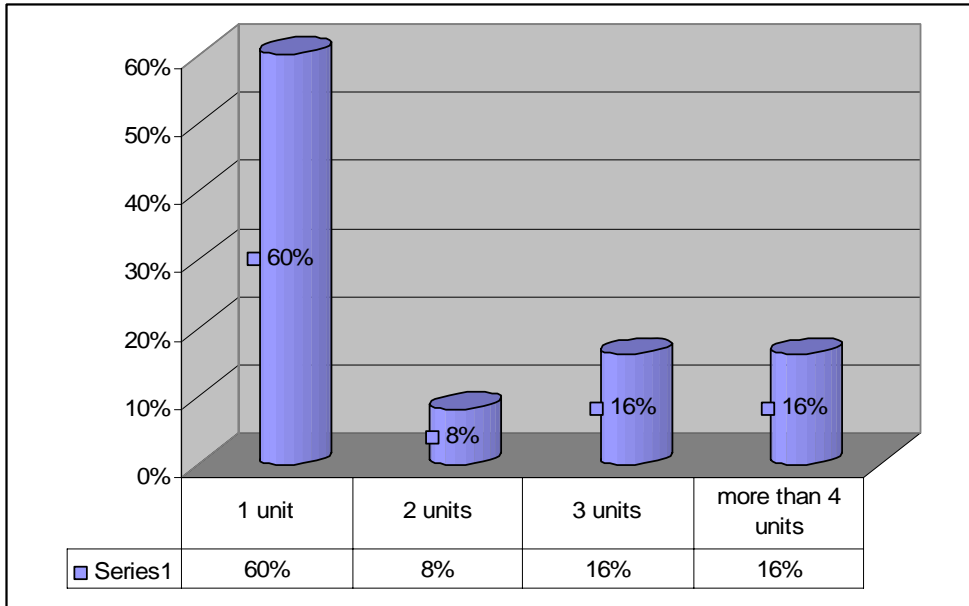

As far as the number of the audio-video devices used in vocational schools, figures indicate that 20% of the teachers use over-head projectors, VCRs, and cassette or CD players, 19% of them use TV or cable television. Being the latest developments in the field, DVD players are used only by 10% of the teachers and PC projectors by 11%. The transition from the analogue to the digital era is still very slow and needs encouragement and support. Training courses are absolutely necessary, the advantages offered by the latter in the teaching and learning process being well-known.

The number of units in the vocational high schools is also variable, as it can be seen from the graphics below:

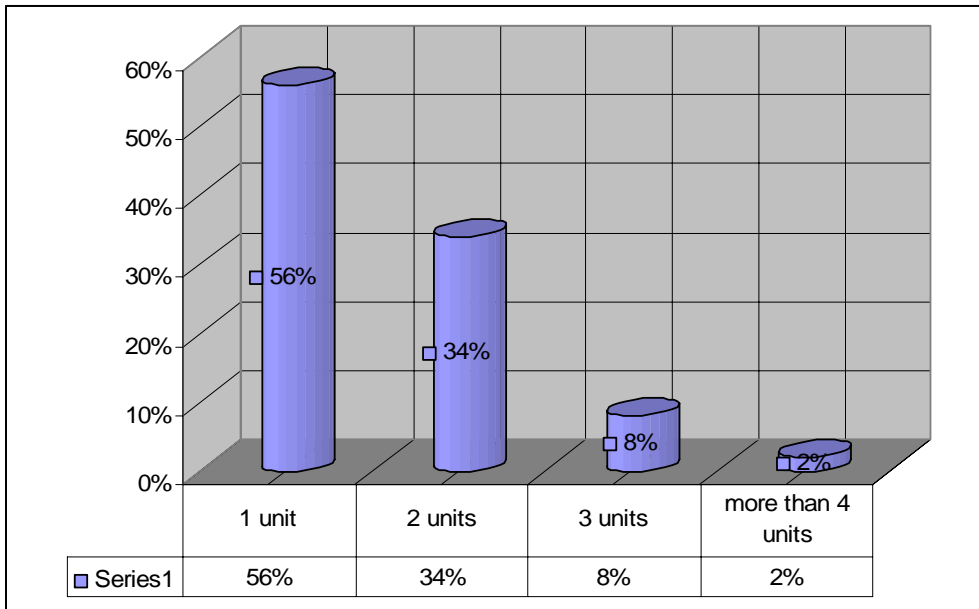

4.2.1. OVER HEAD PROJECTOR

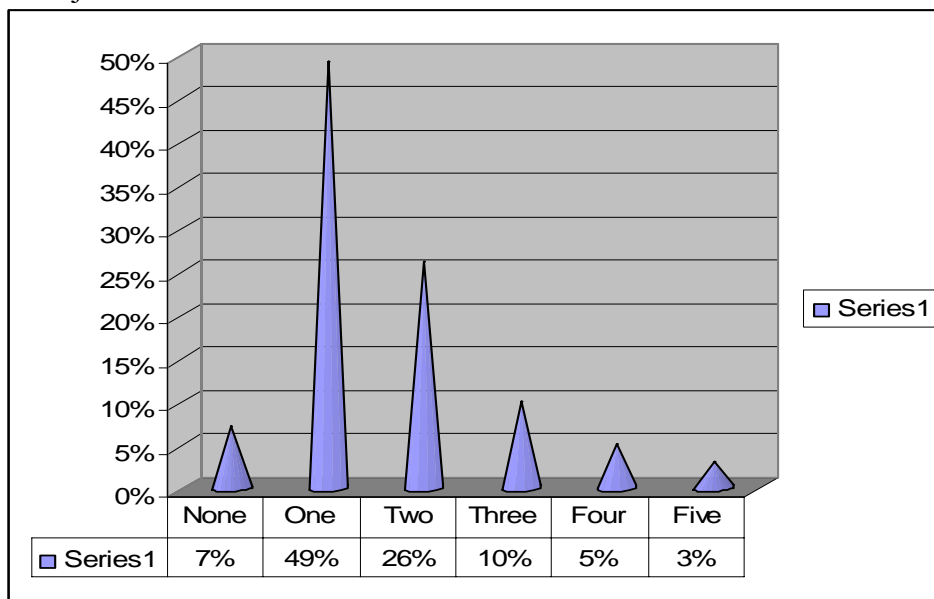

4.2.2. TV Cable Satellite

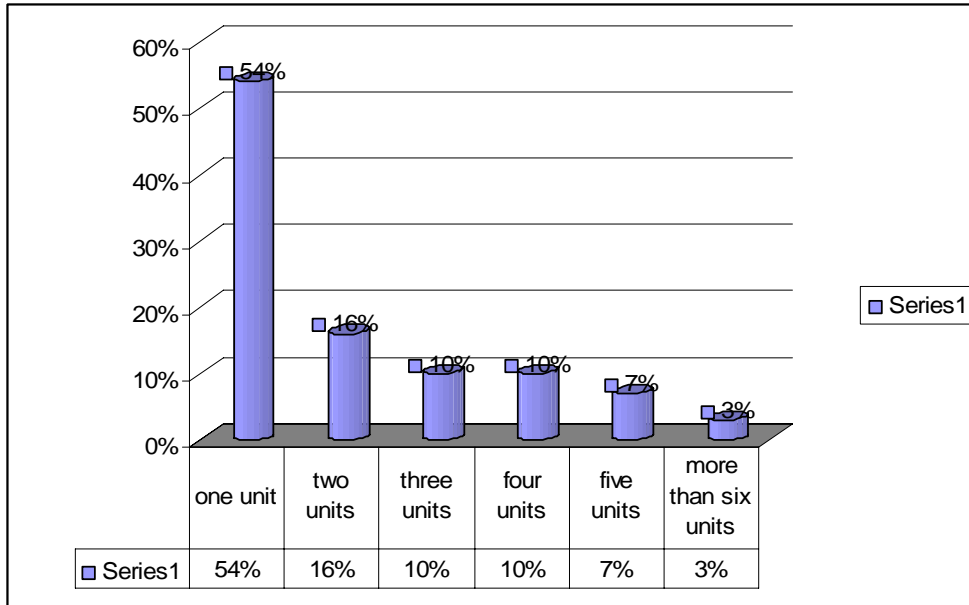

4.2.3. Video

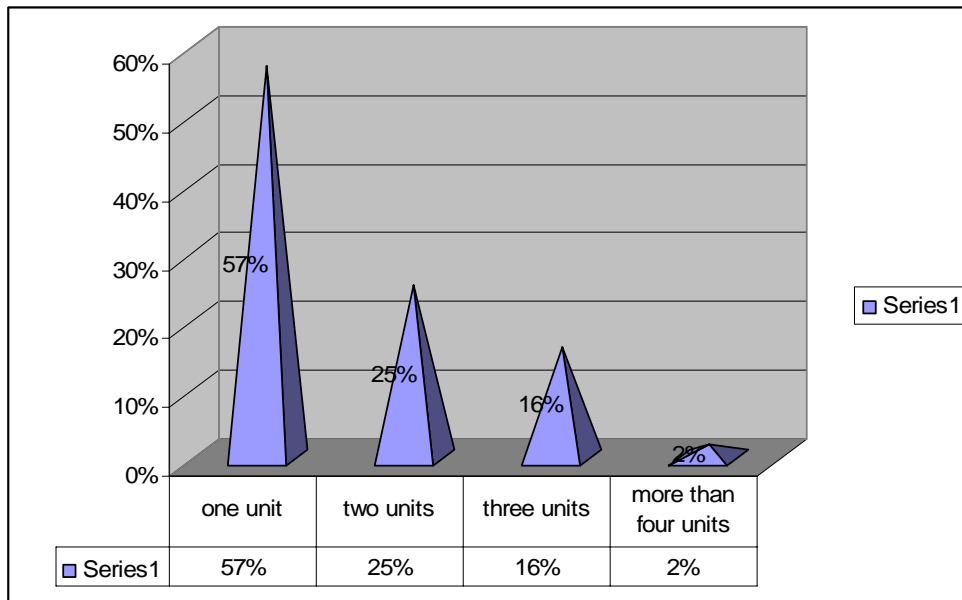

4.2.4. PC Projector

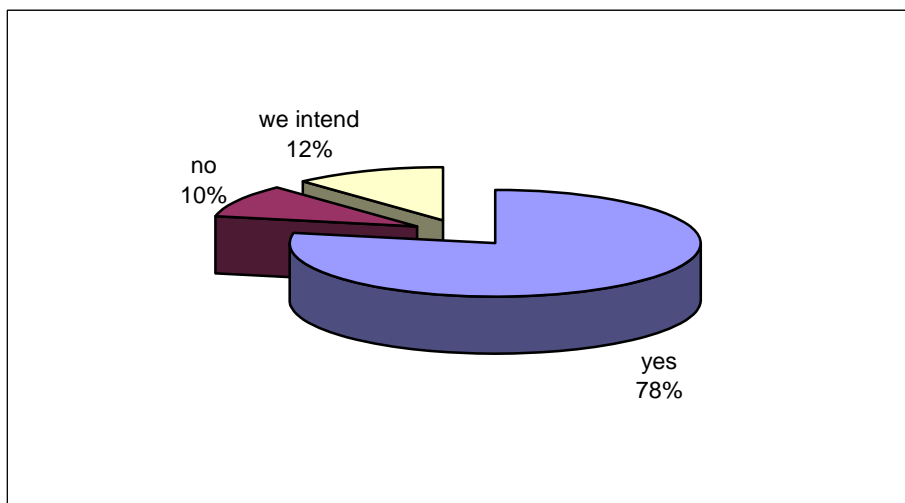

4.2.5. CD / Cassettes Player

4.2.6. DVD player

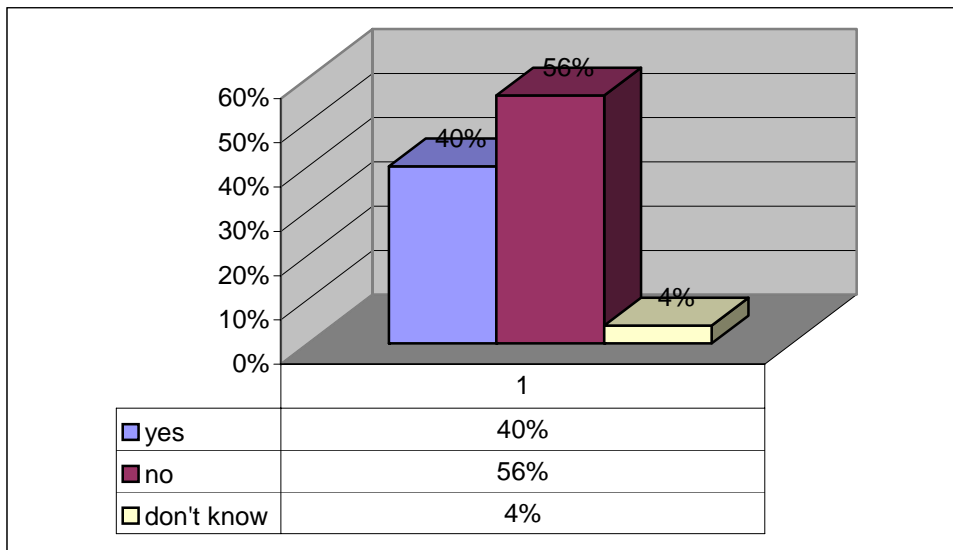

4.3.	Do you use recordings on cassettes/VHS/CDs/DVDs to supplement class interaction?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
------	--	---------------------------------	--------------------------------	---

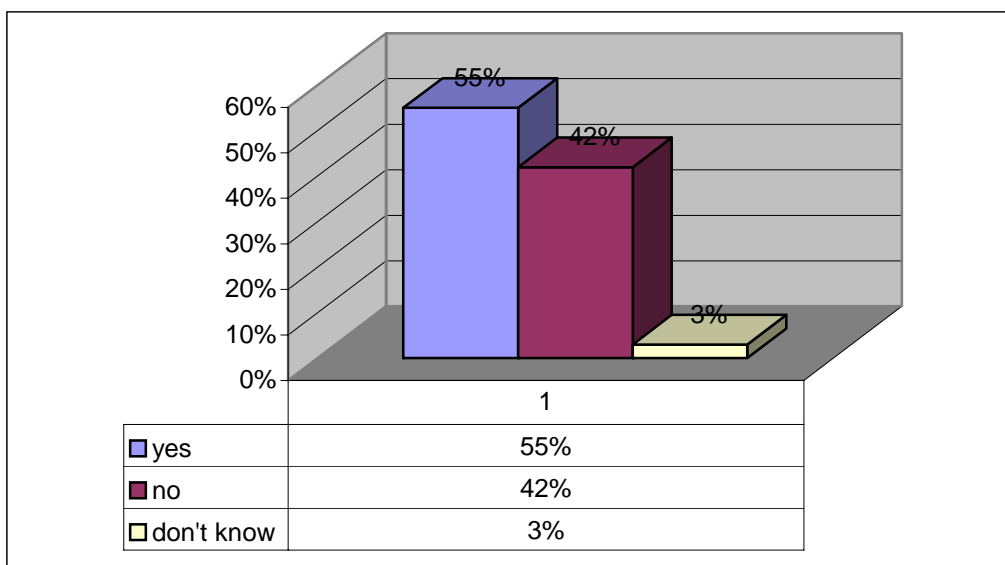

The number of positive answers increases to 78% when questions refer to the use of definite audio-video devices: audio and video cassettes, CDs and DVDs. Only 10% don't use them, and 12% want to do it in the future. The question being a general one, and referring to the use of multimedia devices to supplement class interaction, its relevance is restricted to this area of didactic activities. Arousing interest, creating diversity in the educational approaches, actively involving students in the learning process, and allowing individual progress are some of the advantages of using the specified audio-video devices.

4.4.	Do you transfer audio/video cassettes to CD/DVD?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Don't know <input type="checkbox"/>
------	--	---------------------------------	--------------------------------	--

The transfer of audio/video cassette contents to CDs and DVDs is done, at the time of our research, by 40% of the questioned teachers. A higher percentage of the vocational high school teachers (58%) don't do it, and 4% declared that they don't know what this means. The need for training courses in the field is more than obvious.

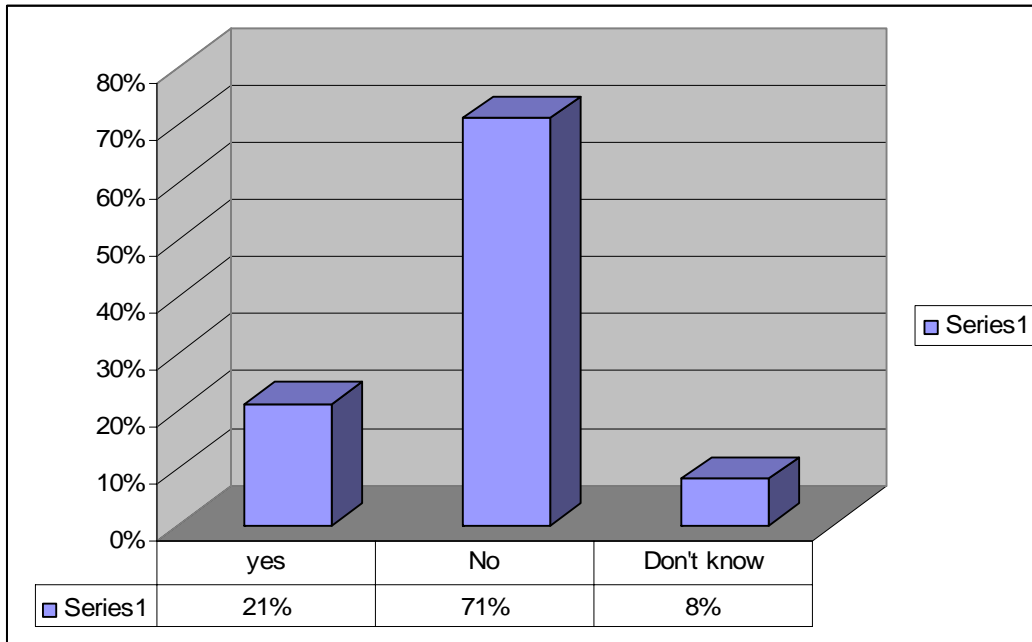

4.5.	Do you transfer CDs to MP3?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Don't know <input type="checkbox"/>
------	-----------------------------	---------------------------------	--------------------------------	--

Vocational high school teachers are interested in transferring CDs to MP3. 55% of them gave positive answers to this question and 42% negative ones, while 3% don't

know about this yet. It is not very clear, though, how many of the teachers transfer educational software from CDs to MP3s and which is the exact number of these teachers who use this kind of transfer to store a larger quantity of music for their personal use and enjoyment.

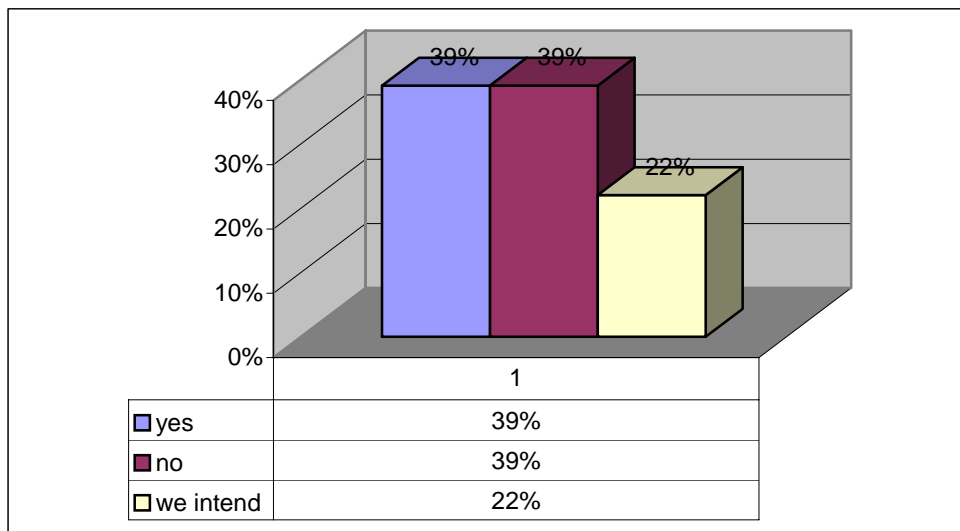

4.6.	Do you transfer VHS to DVD?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Don't know <input type="checkbox"/>
-------------	-----------------------------	---------------------------------	--------------------------------	--

The interest and expertise of the teachers decreases when transferring VHS to DVD. Only 21% of the teachers have the expertise to do this transfer, 71% gave a negative answer, and 8% admit that they don't know how to do it. Training courses meant to create the necessary skill for such a transfer are necessary.

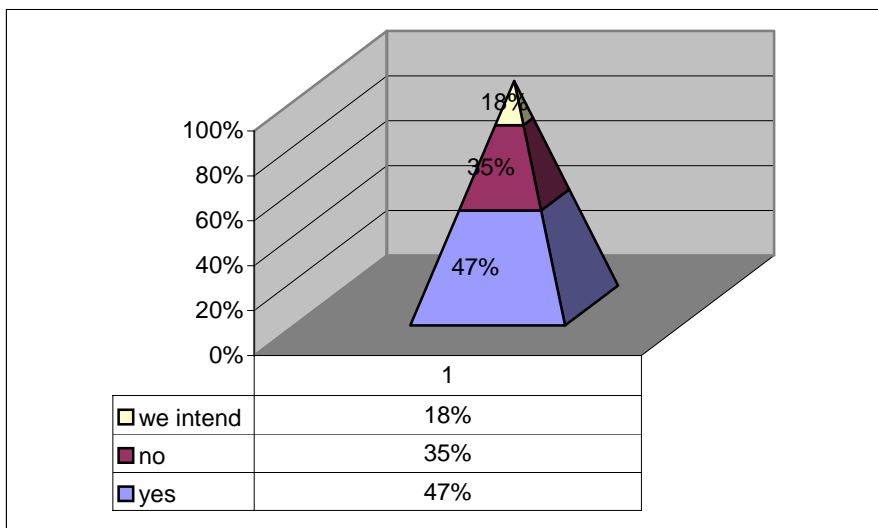

5. IDENTIFY CHARACTERISTICS OF SOFTWARE USED IN YOUR LABORATORIES INVOLVED IN TEACHING & LEARNING PROCESSES

5.1.	Do you use computer assisted language learning including working with web resources to support Romanian language teaching?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
-------------	--	---------------------------------	--------------------------------	---

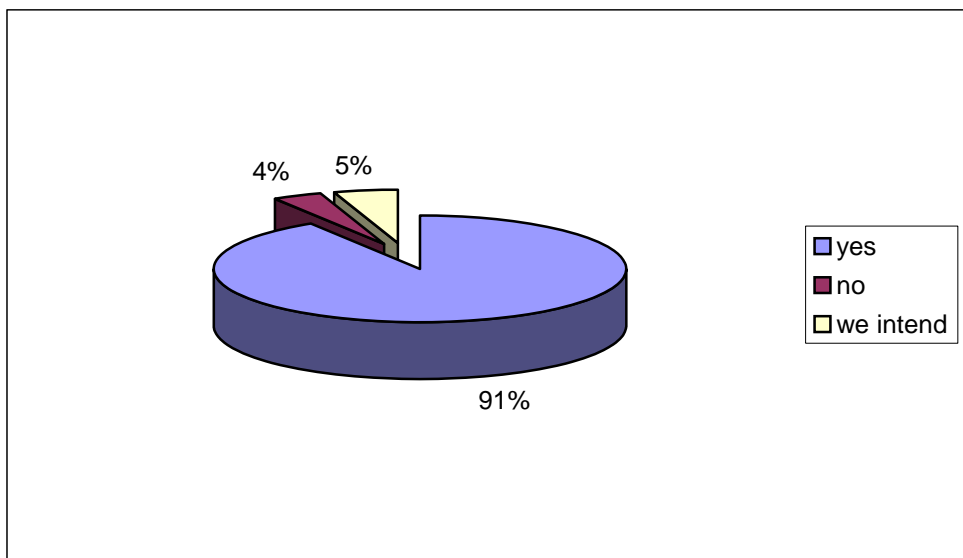

There is an equal proportion of the questioned teachers (39%), who either use or do not use computer assisted language learning technologies or web resources during their lessons of Romanian. There is a significant number of vocational high school teachers (22%) who expressed their intention to do it. Although the last percentage encourages the efforts that can be made in this field, many of the teachers of Romanian, middle-aged, young, or at the end of their career, prefer the traditional methods. They feel more comfortable and more secure this way.

5.2.	Do you use computer assisted language learning including working with web resources to support foreign language teaching?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
-------------	---	---------------------------------	--------------------------------	---

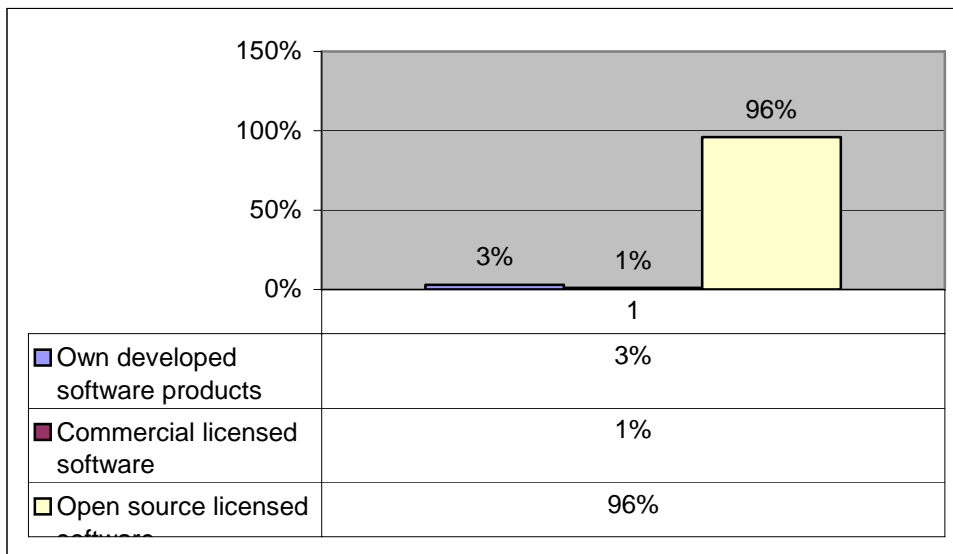

Foreign languages are the main beneficiaries of computer assisted language learning. The large number of vocational software dedicated mainly to the teaching of English, combined with the well-known interest and initiative of the foreign language teachers explains the comparatively high percentage of those who integrate ICT in the teaching and learning process. As a result, 47% of the respondents gave affirmative answers and 18% expressed their interest in the new methodologies. There is, nevertheless, a significantly large number of vocational high school teachers (35%), who seem to be more interested in using the traditional methods or multimedia labs.

5.3.	Do you use computer assisted learning activities including working with web resources in the process of teaching other subjects?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
-------------	--	---------------------------------	--------------------------------	---

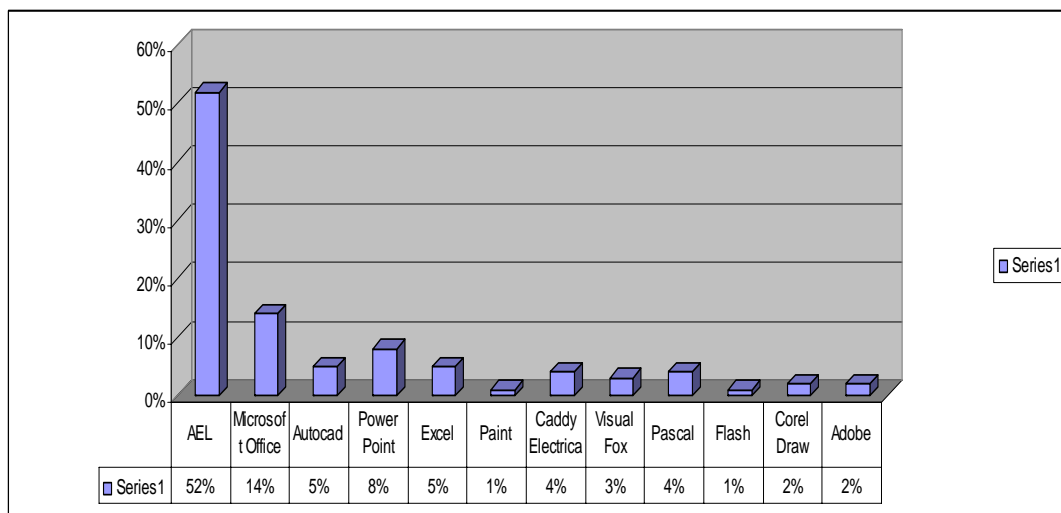

The percentage of teachers who use computer assisted and on line learning activities looks impressive: 91%! Teachers of Mathematics, Physics, Chemistry, Economics, Computer Science, History, Geography, and Technological Subjects started using educational software. There is a small number of teachers, 4%, who are not familiar with such techniques, and 5% intend to use them. Vocational high school teachers are familiar with ICT because they were encouraged and helped to integrate computers within their lessons. With more and more teachers being not only interested, but also able to use computer assisted and on line techniques for educational purposes, the demand for the appropriate software increases.

5.4.	In general, the educational software used is:	Your own developed software products <input type="checkbox"/>	Commercial licensed software <input type="checkbox"/>	Open Source licensed software <input type="checkbox"/>
------	---	--	--	---

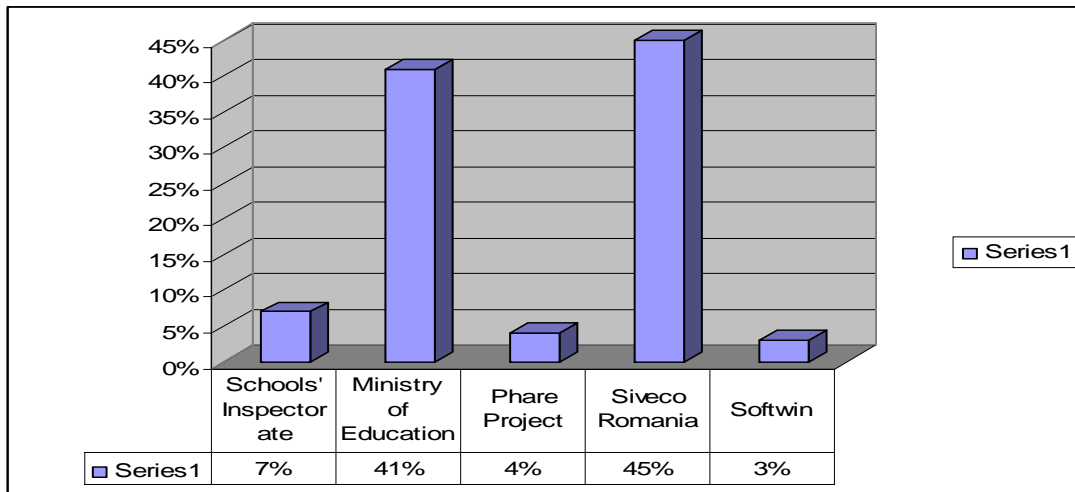

The software used by 96% of the respondents is open source licensed. Own developed software products are used by 3% of the teachers. Very significantly, only 1% of the vocational high school teachers use commercially licensed software! The term “licensed” must be seen as a vague one and better understood. We don’t know for sure if all vocational high schools legally purchased the software and we didn’t ask a specific question to find out whether some of it is pirated or not.

5.5.	Mention some of the software products used in you teaching activities.	1.....	2.....	3.....
------	--	-----------------	-----------------	-----------------

There is some variety in the software used by the Romanian vocational high school teachers for educational purposes. Significantly enough, AEL is the favourite, 52% of the teachers declaring their preference for it. Being promoted by the Romanian Ministry of Education and Research, the software provided by AEL is somehow perceived as both official and compulsory. The fact that it was distributed to all vocational high schools also explains the fact than half of the teachers use it. Computer literacy of these teachers is shown by the use of other well-known software mentioned in the answers.

5.6.	Specify the source(s) of the software products used in you teaching activities.	1.....	2.....	3.....
------	---	-----------------	-----------------	-----------------

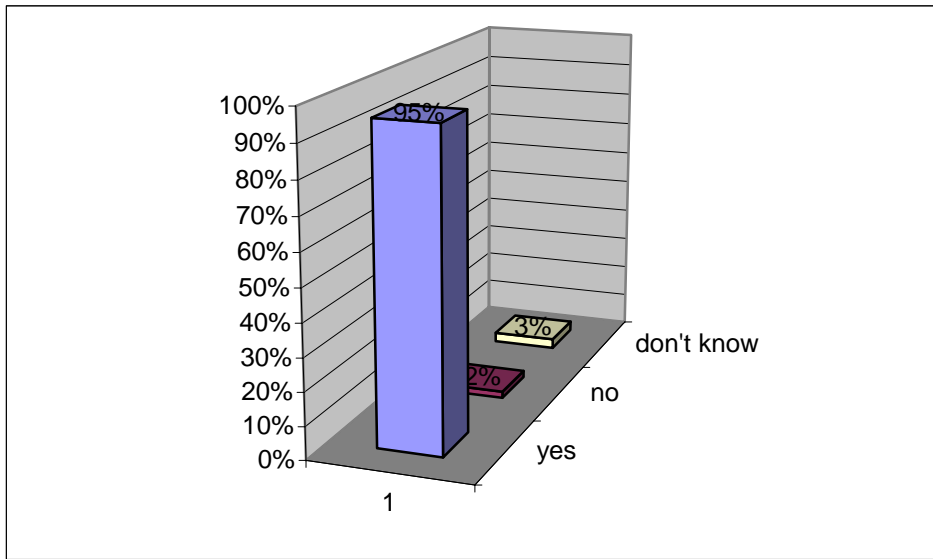

Siveco Romania, with a percentage of 46%, is the main software supplier of the educational market. The quality of its products, as well as their variety and flexibility greatly contributed the success of the firm. The Ministry of Education and Research (41%) seems to be the second producer of the educational software used in vocational high schools, but we have to take into consideration that the software distributed by the ministry to vocational high schools is in fact produced by the Siveco (<http://www.siveco.ro>)! The process of decentralization of the educational system being still in progress, the ministry continues to play an important role, and this is both administrative and didactic. Financial resources that are used for creating educational software's are also concentrated at the central level and the way they are used is illustrated by the AEL component of the SEI programme.

Schools' inspectorates have a minor contribution in this field, with a percentage of 7%. Being mainly involved in administrative matters, these institutions didn't find the best ways to coordinate local initiatives or launching their own ICT programmes, although all the vocational high school servers are connected to the server of the inspectorate.

Other minor "actors" in the "game" are Softwin and Phare Project, with percentages of 3%, while software produced by vocational high school teachers is insignificant for the statistic point of view. Even when such products do exist in a percentage of 3% (shown by 5.4) they are used only by those who produced them, without being known, or made known by other similar schools. The lack of own produced educational software is, therefore, accompanied by the lack of their dissemination.

5.7.	Would you be interested in a training course on development of ICT supporting materials for language teaching if available?	yes <input type="checkbox"/>	no <input type="checkbox"/>	Don't know <input type="checkbox"/>
------	---	---------------------------------	--------------------------------	--

The interest in a training course on development of ICT supporting materials for language teaching is very high. As graphics show, 95% of those who filled in our questionnaire are interested in learning how to create educational software which they can use afterwards in the teaching and learning process of international or less taught languages. The methodological aspects of using ICT in language teaching arouse an equally high degree of interest among the vocational high school teachers of languages. They manifest their interest in learning how to use educational software within class activities. At the same time, they seem more confident on their theoretical and practical knowledge concerning language teaching and learning methodologies.

CONCLUSIONS

1. ICT LABORATORIES AVAILABLE IN ROMANIAN VOCATIONAL HIGH SCHOOLS

All respondents confirmed the existence of ICT laboratories in their institutions. The hardware infrastructure in the vocational high schools was provided mainly by the Ministry of Education and Research through the nationwide run programme **SEI**.

The number of laboratories varies between 1 and 5. There are vocational high schools (16%), whose managers showed little interest in the acquisition of IT laboratories, being probably satisfied with the platform provided by the SEI project. The highest percentage, 29%, includes vocational high schools with three laboratories. Only 5% of the respondent institutions have more than 6 laboratories.

As far as the intentions of expanding the number of ICT equipped laboratories are concerned, the high percentage of affirmative answers received, 87%, clearly indicates the intention to expand the number of ICT labs. Not only teachers but also vocational school managers seem determined to enhance the school development through the use of the new technologies. Nationwide-run projects in the field aroused interest in the use of the new technologies and stimulated local initiatives.

45% of the questioned institutions have 25 workstations, on average, in each laboratory. These are the platforms distributed by the Romanian Ministry of Education and Research within the SEI programme. Very significantly, a larger number of vocational high schools have more than 25 units in each laboratory, and only 6% have less than 25 units.

The use of a server with the workstations has become common practice in Romanian vocational high schools. Educational software being available, as well as their use for the teaching and learning of 10 different subjects, a server has evidently become a necessity. As it can be seen from the graphics, 94% of the respondents confirmed the use of at least one server which is used with the workstations.

The number of servers increases with the number of laboratories in each vocational high-school. This creates the perspective of interconnecting vocational high school servers in order to create local and regional networks. Only 4% of the questioned institutions admitted to having no server connected with the workstations.

The most worrying outcome of our research is the fact that 80% of the server/ICT operators restrict the access of the workstations and only 19% of them permit it. This indicates a very subjective behaviour that can compromise any effort made by the teachers to use the IT equipment for educational purposes, and clearly contradicts the official regulations. Such an attitude shows that, instead of becoming promoters of the computer assisted methodology and techniques, the server/ICT operators are under the false impression that they own the IT laboratories and it is in their personal power to allow the free use of them by the teachers.

78% of the respondents confirmed that their computer platforms are organized, installed and configured in room-based local networks. According to the information

provided by the administrators of the IT-Based Educational System (SEI) „vocational schools servers are connected to the schools’ inspectorate server in each district. The laboratories (local solutions) are integrated into a logical network comprising all the schools in a region. All Romanian regions are integrated into a national network connected to and coordinated by the SEI management unit. (See annex) In the exchange of information between educational institutions, IT is primarily used to support the administration, but most importantly to support the teaching and learning activities”.

The fact that 84% of the vocational high-schools are connected to the INTERNET is, first of all, the result of the special interest the Ministry has in ensuring a quick and effective exchange of information with the educational institutions all over the country. According to the Ministry of Education and Research, in 2001, access to Internet resources was limited (1 computer connected to the Internet per 100 pupils in secondary schools, and 3.5 in high schools). Within SEI, schools were connected to the Internet as part of administrative projects, aiming also to re-use the technology for educational purposes. All computer platforms are delivered with facilities for Internet connection – modem, router. Although the situation seems quite positive, 14% of the questioned vocational high schools do not have a permanent connection to the INTERNET. This may be due to the local technical conditions: lack of permanent access to the public digital telephone services or lack of allocated funds for this purpose. 2% of the respondents don’t know if they are connected to the INTERNET.

The fact that 84% of the vocational high-schools are connected to the INTERNET is, first of all, the result of the special interest the Ministry has in ensuring a quick and effective exchange of information with the educational institutions all over the country. According to the Ministry of Education and Research, in 2001, access to Internet resources was limited (1 computer connected to the Internet per 100 pupils in secondary schools, and 3.5 in high schools). Within SEI, schools were connected to the Internet as part of administrative projects, aiming also to re-use the technology for educational purposes. All computer platforms are delivered with facilities for Internet connection – modem, router. Although the situation seems quite positive, 14% of the questioned vocational high schools do not have a permanent connection to the INTERNET. This may be due to the local technical conditions: lack of permanent access to the public digital telephone services or lack of allocated funds for this purpose. 2% of the respondents don’t know if they are connected to the INTERNET.

2. THE CHARACTERISTICS OF THE ACTIVITY INVOLVING ICT-EQUIPMENT IN TEACHING & LEARNING PROCESSES

Vocational high school teachers take advantage of the access to the Internet ensured by the ICT platforms. The very high percentage of web users, 97%, confirms the official information that 25000 high-school teachers were trained as part of the SEI programme of delivering the platforms. The training sessions held for expert’s teachers and inspectors provided the information and formed the basic skills necessary for them to use the Web for personal purposes. The training courses introduced in life-long learning curricula for teachers (general computer skills and using ITC in teaching) also contributed to the high rate of computer literacy in Romanian vocational high schools. According to the same official source of information 206 teachers were trained and 7000 teachers each year are estimated to be trained in the SEI programme. (see the web page of the Ministry of Education and Sciences, www.edu.ro) Only 3% of the

questioned teachers *intend* to use the web, and there are no teachers who don't use this facility.

The use of the Web for teaching and learning activities is confirmed by 71% of the vocational school teachers. A low percentage of teachers, 11%, don't use it for educational purposes, and 18% expressed their intention to start using the Web as part of their professional activity.

The fairly equal percentage of users (41%), and non-users (40%) of blogs for teaching and learning purposes indicates the moderate interest of the Romanian vocational teachers in this area. The fact that less than 50% of the INTERNET users are interested in integrating blogs into lessons is due to the novelty of the device. Consequently, almost half of the users have little or no information in this field. If we add the 19% percentage of the teachers who expressed their intention to use blogs for educational purposes to the already existing percentage of blog-users (41%) we may expect an increasing percentage of the blog-users in the next years.

Although this is not an easy activity, 78% of the questioned institutions involve their students in creating web pages. The access to the local networks and especially the access to the INTERNET facilitates communication and more and more vocational high schools created their own web pages which they use not only for administrative purposes but also to make themselves and their educational policy known by the local communities or nationwide. However, as it can be seen from the list of vocational high schools (annex 3); few of them have an e-mail address that also leads to their web pages.

The use of portfolios has already become a common practice in vocational high schools. As the graphic shows, 79% of the teachers use portfolios in the teaching and learning process, 15% don't use them, and 6% expressed their intention to include portfolios in their educational practice. Both teachers and students are already using portfolios for some years and this method is common practice not only in high schools but also in middle and primary schools. The increasing level of computer literacy provided the necessary tools for creating electronic portfolios, too.

3. THE CHARACTERISTICS OF THE ICT-EQUIPPED LABORATORIES USED IN THE TEACHING & LEARNING PROCESSES

The answers received indicate that very few laboratories are used for computer-assisted teaching of Romanian. 82% of the vocational high schools don't use their ICT-equipped laboratories for this purpose. Only 14% of the vocational schools use one lab in the teaching and learning of Romanian. The percentage of vocational high schools that use two labs for the same purpose is even less (only 4%), although, according to official information: *each high-school in Romania currently has at least one IT educational platform for use in teaching and learning not only of Mathematics, Biology, Physics, Chemistry, Computer Science, History but also of the **Romanian language.***

The situation is almost identical with the computer assisted teaching of the foreign languages, although, in Romania, these teachers, and especially teachers of English, are considered pioneers in using computer assisted language teaching. Yet,

84% of the respondents don't use IT laboratories for this purpose, 13% use one lab, and 3% more two labs.

The computer assisted teaching of other subjects than Romanian and a foreign language is in a more favourable situation. 43% of the respondents use one lab for this purpose, 12% use two labs, 5% three laboratories, and 2% use four or five laboratories. This gives a total of 64% users of laboratories, and a rather high percentage of teachers (36%) who do not use ICT for didactic purposes. On one hand, the larger number of "other subjects" included here explains the difference of percentages. The teaching and learning of Mathematics, Biology, Physics, Chemistry, Computer Science, Technologies and even History and Geography are in a more favourable position than the computer assisted teaching and learning of Romanian and foreign languages.

4. OTHER EQUIPMENT USED IN THE LABORATORIES, BESIDES ICT, INVOLVED IN TEACHING & LEARNING PROCESSES

The use of audio-video equipment for teaching and learning purposes has started in Romania since the 1970s. Over-head projectors, VCRs, tape recorders, cassette players, slide projectors, movie projectors, television, and cable TV are currently used by most of the teachers. Those who don't use multimedia devices already constitute a minority: 12%. Most of the vocational school teachers (71%) currently use such devices, and 17% expressed their intention to do it in the future.

Figures indicate that 20% of the teachers use over-head projectors, VCRs, and cassette or CD players, 19% of them use TV or cable television. Being the latest developments in the field, DVD players are used only by 10% of the teachers and PC projectors by 11%. The transition from the analogue to the digital era is still very slow and needs encouragement and support.

The number of positive answers increases to 78% when questions refer to the use of definite audio-video devices: audio and video cassettes, CDs and DVDs. Only 10% don't use them, and 12% want to do it in the future.

The transfer of audio/video cassette contents to CDs and DVDs is done, at the time of our research, by 40% of the questioned teachers. A higher percentage of the vocational high school teachers (58%) don't do it, and 4% declared that they don't know what this means. The need for training courses in the field is more than obvious.

Vocational high school teachers are interested in transferring CDs to MP3. 55% of them gave positive answers to this question and 42% negative ones, while 3% don't know about this yet. It is not very clear, though, how many of the teachers transfer educational software from CDs to MP3s and which is the exact number of these teachers who use this kind of transfer to store a larger quantity of music for their personal use and enjoyment.

The interest and expertise of the teachers decreases when transferring VHS to DVD. Only 21% of the teachers have the expertise to do this transfer, 71% gave a negative answer, and 8% admit that they don't know how to do it. Training courses meant to create the necessary skill for such a transfer are necessary.

5. CHARACTERISTICS OF SOFTWARE USED IN THE LABORATORIES INVOLVED IN TEACHING & LEARNING PROCESSES

There is an equal proportion of the questioned teachers (39%), who either use or do not use computer assisted language learning technologies or web resources during their lessons of Romanian. There are a significant number of vocational high school teachers (22%) who expressed their intention to do it.

Foreign languages are the main beneficiaries of computer assisted language learning. The large number of vocational software dedicated mainly to the teaching of English, combined with the well-known interest and initiative of the foreign language teachers explains the comparatively high percentage of those who integrate ICT in the teaching and learning process. As a result, 47% of the respondents gave affirmative answers and 18% expressed their interest in the new methodologies. There are, nevertheless, a significantly large number of vocational high school teachers (35%), who seem to be more interested in using the traditional methods or multimedia labs.

The percentage of teachers who use computer assisted and on line learning activities looks impressive: 91%! Teachers of Mathematics, Physics, Chemistry, Economics, Computer Science, History, Geography, and Technological Subjects started using educational software. There are a small number of teachers, 4%, who are not familiar with such techniques, and 5% intend to use them. Vocational high school teachers are familiar with ICT because they were encouraged and helped to integrate computers within their lessons. With more and more teachers being not only interested, but also able to use computer assisted and on line techniques for educational purposes, the demand for the appropriate software increases.

The software used by 96% of the respondents is open source licensed. Own developed software products are used by 3% of the teachers. Very significantly, only 1% of the vocational high school teachers use commercially licensed software! The term “licensed” must be seen as a vague one and better understood. We don’t know for sure if all vocational high schools legally purchased the software and we didn’t ask a specific question to find out whether some of it is pirated or not.

There is some variety in the software used by the Romanian vocational high school teachers for educational purposes. Significantly enough, AEL is the favourite, 52% of the teachers declaring their preference for it. Being promoted by the Romanian Ministry of Education and Research, the software provided by AEL is somehow perceived as both official and compulsory. The fact that it was distributed to all vocational high schools also explains the fact than half of the teachers use it. Computer literacy of these teachers is shown by the use of other well-known software mentioned in the answers.

Siveco Romania, with a percentage of 46%, is the main software supplier of the educational market. The quality of its products, as well as their variety and flexibility greatly contributed to the success of the firm. The Ministry of Education and Research (41%) seems to be the second producer of the educational software used in vocational high schools, but we have to take into consideration that the software distributed by the ministry to vocational high schools is in fact produced by Siveco! Schools’

inspectorates have a minor contribution in this field, with a percentage of 7%. Being mainly involved in administrative matters, these institutions didn't find the best ways to coordinate local initiatives or launching their own ICT programmes, although all the vocational high school servers are connected to the server of the inspectorate. Other minor "actors" in the "game" are Softwin and Phare Project, with percentages of 3%, while software produced by vocational high school teachers are insignificant for the statistic point of view. Even when such products do exist in a percentage of 3% (shown by 5.4) they are used only by those who produced them, without being known, or made known by other similar schools. The lack of own produced educational software is, therefore, accompanied by the lack of their dissemination.

The interest in a training course on development of ICT supporting materials for language teaching is very high. As graphics show, 95% of those who filled in our questionnaire are interested in learning how to create educational software which they can use afterwards in the teaching and learning process of international or less taught languages. The methodological aspects of using ICT in language teaching arouse an equally high degree of interest among the vocational high school teachers of languages. They manifest their interest in learning how to use educational software within class activities. At the same time, they seem more confident on their theoretical and practical knowledge concerning language teaching and learning methodologies.

Please, tick the corresponding answer according to your situation. e.g. 

1. IDENTIFY THE CHARACTERISTICS OF YOUR ICT-EQUIPPED LABORATORIES				
1.1.	Do you have ICT laboratories within you institution?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
1.2.	Specify the number of ICT laboratories		
1.3.	Are there any intentions to expand the number of ICT laboratories?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	
1.4.	How many workstations (PC units), on average, are there in each laboratory ?		
1.5.	Do you use a server with the workstations?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
1.6.	Does the server / ICT operator restrict the access of the workstations?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Partially <input type="checkbox"/>
1.7.	Are the workstations connected to a local network (INTRANET) ?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Partially <input type="checkbox"/>
1.8.	Are the workstations connected to an external network (INTERNET) ?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Partially <input type="checkbox"/>
2. IDENTIFY THE CHARACTERISTICS OF YOUR ACTIVITY INVOLVING ICT-EQUIPMENT IN TEACHING & LEARNING PROCESSES				
2.1.	Do you use the Web for personal use ?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
2.2.	Do you use the Web for teaching and learning in your classes?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>

2.3.	Do you use blogs for teaching and learning in your classes?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
2.4.	Have you had your students write web pages ?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
2.5.	Do you use portfolios with your students ?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
3.	IDENTIFY THE CHARACTERISTICS REGARDING YOUR ICT-EQUIPPED LABORATORIES USED IN THE TEACHING & LEARNING PROCESSES			
3.1.	How many of the available laboratories are used exclusively for computer assisted Romanian language teaching ?		
3.2.	How many of the available laboratories are used exclusively for computer assisted foreign languages teaching ?		
3.3.	How many of the available laboratories are also used for computer assisted teaching in case of other subjects, e.g. ?		
4.	IDENTIFY OTHER EQUIPMENT USED IN YOUR LABORATORIES BESIDES ICT INVOLVED IN TEACHING & LEARNING PROCESSES			
4.1	Do you use any other audio-video equipment in your laboratories, e.g., Over Head Projector, PC Projector, VCR, DVD, TV, etc. ?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
4.2.	Specify the number of these audio-video equipment items. (e.g. <input type="text" value="2"/> , <input type="text" value="0"/>)	Over Head Projector <input type="checkbox"/>	Cable / Satellite Television <input type="checkbox"/>	Video <input type="checkbox"/>
		PC Projector <input type="checkbox"/>	CD/Cassettes player <input type="checkbox"/>	DVD player <input type="checkbox"/>
4.3.	Do you use recordings on cassettes/VHS/CDs/DVDs to supplement class interaction?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
4.4.	Do you transfer audio cassettes to CD?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
4.5.	Do you transfer CDs to MP3 ?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
4.6.	Do you transfer VHS to DVD ?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
5.	IDENTIFY CHARACTERISTICS OF SOFTWARE USED IN YOUR LABORATORIES INVOLVED IN TEACHING & LEARNING PROCESSES			
5.1.	Do you use computer assisted language learning including working with web resources to support Romanian language teaching ?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
5.2.	Do you use computer assisted language learning including working with web resources to support foreign language teaching ?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>
5.3.	Do you use computer assisted learning activities including working with web resources in the process of teaching other subjects?	Yes <input type="checkbox"/>	No <input type="checkbox"/>	Planning in the near future <input type="checkbox"/>

5.4.	In general, the educational software used is:	Your own developed software products <input type="checkbox"/>	Commercial licensed software <input type="checkbox"/>	Open Source licensed software <input type="checkbox"/>
5.5.	Mention some of the software products used in you teaching activities.	1.....	2.....	3.....
5.6.	Specify the source(s) of the software products used in you teaching activities.	1.....	2.....	3.....
5.7.	Would you be interested in a course on methodology aspects of using ICT in language teaching? If so, what kind of courses do you prefer ?	onsite courses <input type="checkbox"/>	online courses <input type="checkbox"/>	mixed courses <input type="checkbox"/>
5.7.	Would you be interested in a course on development of ICT supporting materials for language teaching? If so, what kind of courses do you prefer ?	onsite courses <input type="checkbox"/>	online courses <input type="checkbox"/>	mixed courses <input type="checkbox"/>

1.4.	Câte stații de lucru (calculatoare), în medie, există în fiecare laborator ?		
1.5.	Utilizați un computer-server împreună cu stațiile de lucru (calculatoarele)?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Intenționăm în viitor <input type="checkbox"/>
1.6.	Accesul la stațiile de lucru (calculatoare) este restricționat de operatorul / responsabilul laboratorului?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Nu știu <input type="checkbox"/>
1.7.	Sunt stațiile de lucru (calculatoarele) conectate la o rețea locală (INTRANET) ?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Nu știu <input type="checkbox"/>
1.8.	Sunt stațiile de lucru (calculatoarele) conectate la o rețea externă (INTERNET) ?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Nu știu <input type="checkbox"/>
2.	IDENTIFICAȚI CARACTERISTICILE ACTIVITĂȚII DVS. CARE IMPLICĂ UTILIZAREA ECHIPAMENTULUI DE TEHNICA INFORMAȚIEI ȘI COMUNICĂRII ÎN PROCESELE DE PREDARE ȘI ÎNVĂȚARE			
2.1.	Utilizați Internet-ul ?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Intenționăm în viitor <input type="checkbox"/>

2.2.	Utilizați Internet-ul pentru predare și învățare în timpul cursurilor susținute de dvs.?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Intenționăm în viitor <input type="checkbox"/>
2.3.	Utilizați platforme de comunicare on-line în cadrul orelor de curs?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Intenționăm în viitor <input type="checkbox"/>
2.4.	Aveți elevi care au pregătit și realizat pagini web ?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Intenționăm în viitor <input type="checkbox"/>
2.5.	Utilizați portofolii electronice de materiale cu elevii dvs.?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Intenționăm în viitor <input type="checkbox"/>
3.	IDENTIFICAȚI CARACTERISTICILE LABORATOARELOR ECHIPATE CU TEHNICA INFORMAȚIEI ȘI COMUNICĂRII UTILIZATE ÎN PROCESELE DE PREDARE ȘI ÎNVĂȚARE			
3.1.	Câte dintre laboratoarele disponibile sunt utilizate exclusiv pentru predarea asistată de calculator a limbii române ?		
3.2.	Câte dintre laboratoarele disponibile sunt utilizate exclusiv pentru predarea asistată de calculator a limbilor străine ?		
3.3.	Câte dintre laboratoarele disponibile sunt utilizate exclusiv pentru predarea asistată de calculator a altor materii : ex. ?		
4.	IDENTIFICAȚI ȘI ALTE ECHPAMENTE UTILIZATE ÎN LABORATOARE, ÎN AFARĂ DE CELE DIN TEHNICA INFORMAȚIEI ȘI COMUNICĂRII ÎN PROCESELE DE PREDARE ȘI ÎNVĂȚARE			
4.1	Utilizați orice alt echipament în laboratoare de ex: Retroproiector, Proiector PC, VideoVHS, DVD, TV, etc. ?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Intenționăm în viitor <input type="checkbox"/>
4.2.	Specificați numărul acestor echipamente audio-video. (e.g. <input style="width: 30px; height: 20px; border: 1px solid black; text-align: center; font-size: 1.2em;"/> 12)	Video/Retro-proiector <input style="width: 50px; height: 20px; border: 1px solid black;" type="text"/>	TV - Cablu / Satelit <input style="width: 50px; height: 20px; border: 1px solid black;" type="text"/>	Video <input style="width: 50px; height: 20px; border: 1px solid black;" type="text"/>
		Proiector PC <input style="width: 50px; height: 20px; border: 1px solid black;" type="text"/>	Casetofon / CD player <input style="width: 50px; height: 20px; border: 1px solid black;" type="text"/>	DVD player <input style="width: 50px; height: 20px; border: 1px solid black;" type="text"/>
4.3.	Utilizați înregistrări pe diverse casete Audio – VHS CD-uri / DVD-uri pentru a suplimenta activitățile școlare interactive ?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Intenționăm în viitor <input type="checkbox"/>
4.4.	Efectuați transferul materialelor de pe suporturi clasice, casete Audio – VHS pe suporturi noi, mai moderne, respectiv CD-uri / DVD-uri?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Nu știu cum <input type="checkbox"/>
4.5.	Efectuați transferul și comprimarea CD-urilor audio în fișiere de tip MP3 ?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Nu știu cum <input type="checkbox"/>
4.6.	Efectuați transferul și comprimarea casetelor video VHS în DVD-uri ?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Nu știu cum <input type="checkbox"/>
5.	IDENTIFICAȚI CARACTERISTICILE SOFTULUI EDUCAȚIONAL UTILIZAT ÎN LABORATOARELE IMPLICATE ÎN PROCESELE DE PREDARE & ÎNVĂȚARE			
5.1.	Utilizați vreun program electronic (software) educațional în procesul predării limbilor străine?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Intenționăm în viitor <input type="checkbox"/>
5.2.	Utilizați vreun program electronic (software) educațional în procesul predării limbii române ?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Intenționăm în viitor <input type="checkbox"/>
5.3.	Utilizați programe electronice (software) educaționale în procesul predării altor materii?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Intenționăm în viitor <input type="checkbox"/>

5.4.	În general, programul electronic (software) educațional utilizat este:	Produs concepție proprie cu licență proprie <input type="checkbox"/>	Produs concepție proprie cu licență comercială <input type="checkbox"/>	Produs licențiat achiziționat comercial <input type="checkbox"/>
5.5.	Menționați câteva din programele electronice (software) utilizate în activitatea dvs. de predare	1.....	2.....	3.....
5.6.	Specificați sursele programelor electronice (software) utilizate în activitatea dvs. de predare.	1.....	2.....	3.....
5.7.	Ați fi interesați într-un curs de instruire simplu /accesibil referitor la Învățarea Limbilor Moderne Asistată de Calculator dacă ar exista o ofertă în acest sens ?	Da <input type="checkbox"/>	Nu <input type="checkbox"/>	Nu știu <input type="checkbox"/>
