

Here is a dentist's surgery assistant at school/college.

The hands are significant sources of infection.

The hands are scrubbed and sterile gloves are used.

The dentist's surgery assistant student has set everything up ready for the treatment.

Hello. This is the cavity from last time that we are going to have a look at today.

The therapists' chairs have been set ergonomically correctly.

The surgery lamp is adjusted towards the patient's mouth.

For the present, the patient is a doll.

The dentist is examining the patient, who is going to be anaesthetized.

The patient needs a new filling.

The dentist's surgery assistant assists the dentist during the whole treatment.

The education is exciting.
